

HENGSTLER SAFETY RELAYS FOR RAILWAY PROJECTS

Our Safety Relays H-462, H-464, and H-466 are now compliant through independent evaluation against EN 45545-2:2020.

We're pleased to share that these products have successfully passed evaluation, covering Hazard Levels up to HL3.

What this means in practice:

- Compliance with stringent fire protection requirements for railway applications
- Reduced risk in safety-critical systems
- Greater confidence for operators, system integrators, and OEM's

Products evaluated:

H-462 – 4 & 6 contact versions

H-464 – 8 & 10 contact versions

H-466 – flat versions with 4, 6, 8 & 10 contacts

This milestone reflects the strong collaboration between our engineering and compliance teams and underlines our commitment to delivering reliable, compliant safety components for demanding railway environments.
