Innovative products from your
competent partner. Worldwide

Hengstler Products

Encoders

Absolute Encoders
ACURO drive and ACURO industry,
Incremental Encoders,
Ex-proof and stainless steel versions,
Bus Encoders

Industrial Counting and Control Components

Starting from mini-counters
up to ambitious control counters,
multi-function counters, counters with
interface, position indicators,
timers, tachometers

Printers and Cutters

Printer solutions e.g. applications in the
sector of info points, ticket dispensers,
cash dispensers, POS systems, modular
thermal and needle printers, accessories
such as winders and cutters

Relay technology

Main focus is the worldwide most
versatile product range of safety relays
- relays with guided contact sets -
Furthermore:
bistable relays, insulation relays,
high-voltage relays, mini switching relays

Further Danaher Brands of the Sensors & Controls Group

General
aspects

The Hengstler headquarters in Aldingen.

Good reasons for working with Hengstler

The Hengstler headquarters are located in Aldingen, in South-West Germany, on the edge of the Black Forest - a region famous for its industrial pioneers and inventors. The foundations for the Hengstler company were laid by one of these inventors, Johannes Hengstler, who, in 1846, set up a workshop which was later to become the center of the worldwide Hengstler group.

Better by competence

This catalog provides proof of our competence in the business field of encoders - a comprehensive program characterized (as are all Hengstler products) by state-of-the-art technology, excellent design and highest standards of quality and reliability.

Hengstler - you can count on us.

The workshop was started for the manufacture of clock springs; today, Hengstler products range from miniature counters to absolute hollow shaft encoders.

All technical data and information contained herein, including the graphics, were collected and compiled with the utmost care.

This brochure provides information on products and accessories, which, however, does not constitute any guarantee for technical data or features. The user of these products must

determine himself the suitability of the product for the intended use.

All technical data is subject to alterations. For questions of technical nature or regarding prices and delivery, please contact our company headquarters or field service employees.

Customer Orientation

- Hengstler is never far away - wherever you are in the world
- Application-specific assistance
- Customer-oriented manufacturing (one-piece-flow)
- Fair price/performance ratio
- Short delivery times and a high degree of availability
- 48-hour repair service

Quality

- High-quality materials in accordance with VDE (Association of German Electrotechnical Engineers)
- UL, CL- and TÜV approvals
- DQS-certified to ISO 9001

Variety

- Hengstler offers a wide range of components for counting, controlling, indicating, measuring, switching and printing
- Get it all from one source!
- Benefit from numerous variants - for added flexibility.

Experience

- Hengstler was founded in 1846 and has been manufacturing counters since 1926, printers since 1970, sensors since 1987, relays since 1983...

Competence

- Vast know-how in the fields of development, manufacturing and sales marketing
- Assistance and support are provided by specialists.

Innovation

- Product development is based on state-of-the-art technology and highly advanced processes.
- Our products are setting the pace - around the globe
- We offer communicative products with state-of-the-art bus technology.

Successfull with Hengstler

Innovation at an international level

Our numerous branches and representatives in Europe, America and Asia have made us a truly international enterprise. Our availability around the globe is, of course, a great benefit for our customers - the next Hengstler contact is never far away.

Our sound footing in all parts of the world also has a positive effect on our product know-how. Findings from worldwide research programs provide a pool of information from which, in turn, the material for the carefully directed, overall technological concept is won. These findings form the practice-oriented basis for ongoing innovation and efficiency in all corporate sectors.

The pace of innovation is getting faster and faster in all sectors of technology. Only those who are able to follow or even set this pace will continue to be competitive. Strong, reliable partners are needed to help you cope with these new demands. You need partners whose top priority is added product value/customer value, customer-orientation and high quality.

And taking all this into account, Hengstler is your partner of choice.

Hengstler is a leading European manufacturer in the field of industrial counting and control components, e.g. counters, encoders, industrial and temperature controllers, as well as relays.

The product range is completed by printers and cutters, with Hengstler being the greatest manufacturer for cutters in Europe.

Hengstler: your Technology Partner

One of our particular strengths is the project management of custom applications. The basis for this is our wide experience gained over many years in the fields of electromechanics, mechanics, pneumatics and electronics which is, of course, mirrored in our product program. Hengstler offers its customers complete support starting at the project planning and development right through to the final product. At present we are handling complex projects in the field of pneumatics and printers for well-known companies, such as Bosch, Festo, IBM and Siemens.

Talk to Hengstler.
We can offer solutions.

Encoders from Hengstler - Variety and Class

HENGSTLER

The program range

Incremental Encoders

- Industrial types
- With hollow shaft
- With hollow shaft in high temperature version for motor applications
- Economy types
- Stainless steel encoders

Absolute Encoders

- Singleturn
- Multiturn
- Interfaces: parallel, SSI, CAN, CAN open, Profibus DP, InterBus
- programmable versions

Ex-protected Encoders

Stainless steel versions

Reliable HENGSTLER components such as counters, sensors and printers are perfectly harmonized and thus guarantee simple installation and safe operation.

Technology and Flexibility

Monolithic integrated OPTOASICS reliably replace up to 200 SMD components. On the base of our building block system we can offer customers more than 1 million different shaft encoder versions from 4 different building classes.

The choice is yours :

- **Flanges and shafts** with different connection dimensions and diameters from 6 to 76 mm
- **Resolutions** between 1 and 10,000, for up to 40,000 measuring steps
- **Output drivers** for up to 200 m long cables
- **Covers, cables and connectors** in different lengths and versions
- **Protection classes** up to IP 67

Short delivery times and high availability

Hengstler encoders are manufactured with state of the art production know how. Every single encoder is built according to customer specification, in series quality and in one piece flow. This is why we can handle your wishes very flexibly and at the same time offer you very short delivery times.

The Encoder Sales and Service Team

Excellent products are only one part of the Hengstler performance. The encoder team is always at your service to analyse your problems, advise you according to your application and to offer you customized solutions.

We are usually just around the corner from your location - so contact us whenever your topic is "Encoders".

Integrated OptoAsic

Advantages for you:

- Flexibility due to the modular system
- More safety on account of the optoasics, possible faults eliminated
- Outputs short-circuit proof and overload protected over the whole temperature range
- Self-monitoring and fault detection
- Long service life
- Very high protection against electromagnetic interference

Customer Service

– always remains close to you – thanks to our extensive sales & distribution network. Please contact your local Hengstler distributor, addresses see chapter “Contact” (page 288).

Talk to Hengstler.
We offer solutions.

Customer Advantages

- **Personal customer service**
- **Many years of experience**

Word-wide Representation

You will always find a friendly contact at Hengstler – wherever you are in the world. Our experienced, competent partners are familiar with your branch – just get in touch. Please contact your local Hengstler distributor, addresses see chapter “Contact” (page 288).

Customer Advantages

- **We're there for you - wherever you are - worldwide**

Technical Support

If you should have any technical questions concerning your product selection or specific application – get fast and competent help. See chapter “Contact” (page 288).

Customer Advantages

- **Quick response to your technical queries**

Always on the safe side

Quality and reliability of our products are our top priority. Our quality management system is DQS-certified to DIN EN ISO 9001. Reg. No. 1540-01.

Order Service

You can reach our team to place your order by phone between 8.00 am and 5.00 pm:
Phone +49 800 - 436 47 85 37 or
Phone +49 7424-89 201.

Orders may also be placed 24 hours by
Fax +49 7424-89 500.

Customer Advantages

- **No minimum order quantities or extra charge for small order sizes**
- **At any time reachable for your orders**

Your order will be processed immediately after receipt. If any question remains regarding your order, we will call you back.

Please contact us if you require a quotation for higher quantities, special versions or delivery times. If you can't find your desired product in our catalogue, don't hesitate to let us know - we would be glad to help you.

Please visit as well our online store at
www.hengstler.com.

Shaft diameter	6 mm	10 mm, 12 mm hollow shaft
Absolute max. shaft load	radial 60 N/ axial 40 N	
Balance tolerances		axial ±1.5 mm, radial ±0.2 mm
Max. speed	12 000 min ⁻¹	12 000 min ⁻¹
Torque	≤ 1 Ncm	≤ 1 Ncm
Protection (EN 60529)	Bearing IP 64, Housing IP 65	Bearing IP 64, Housing IP 65
General design	as per DIN EN 61010-1	as per DIN EN 61010-1
Operating temperature	-40 ... +100 °C	-40 ... +100 °C
Vibration (IEC 68-2-6)	≤ 100 m/s ²	≤ 100 m/s ²
Shock (IEC 68-2-27)	≤ 1 000 m/s ²	≤ 1 000 m/s ²
Material housing	Aluminium	Aluminium
Connection	Cable axial or radial Conin axial or radial	Cable axial or radial Conin axial or radial
Size	Ø 58 mm	Ø 58 mm
Weight approx.	265 g	270 g
Technical Data - electrical		
Supply voltage (SELV)	DC 5 V / ±10 %	DC 5 V / ±10 %
Max. current w/o load	120 mA	120 mA
Incremental signals A, B	Sinus-Cosinus 1 V _{ss}	Sinus-Cosinus 1 V _{ss}
Absolute accuracy	±35"	±35"
Repeatability	±7"	±7"
Max. frequency	500 kHz	500 kHz
Reference signal: R	> 0,4 V (1 pulse / turn)	> 0,4 V (1 pulse / turn)
Page	95	97

AC 36 - BiSS / SSI

- Compact design for single or multiturn
- Interfaces: standard SSI, expanded SSI mode or BiSS
- Use of sine / cosine signals for fast control tasks possible

Page 108

Absolute Shaft Encoders - ACURO industry

AC 58 - BiSS / SSI, Parallel

Special Features

- Compact design for single or multiturn
- Aids for start-up and operation: diagnostic LED, preset key with optical response
- Interfaces: standard SSI, expanded SSI mode or BiSS
- Use of sine / cosine signals for fast control tasks possible

Type	AC 58 - BiSS / SSI	AC 58 - Parallel

AC 58 - SSI programmable

Special Features

- Compact design: 59mm length for single or multiturn
- Aids for start-up and operation: diagnostic LED, preset key with optical response
- Parameterization: resolution, code type, sense of rotation, output format, warning, alarm
- Parameters can be stored in a non-volatile memory

Type	AC 58 - SSI Programmable
Technical Data - mechanical	
Housing diameter	58 mm
Protection class shaft input	IP 64 or IP 67
Protection class housing	IP 64 (IP 67 optional)
Flange	Synchro flange, clamping flange, hubshaft with tether, square flange
Shaft diameter	Solid shaft 6 mm, 10 mm; Hub shaft 10 mm, 12 mm
Max. speed	Continuous: 10 000 min ⁻¹ , Short term: 12 000 min ⁻¹
Shaft load	axial 40 N / radial 60 N
Operating temperature	-40 ... 85 °C
Weight approx. ST/MT	260 g / 310 g
Technical Data - electrical	
Supply voltage	DC 10 - 30 V
Max. current w/o load	max. 250 mA
Interface	SSI programmable
Resolution singleturn	10 - 17 Bit
Resolution multiturn	12 Bit
Parameterization	resolution, code type, sense of rotation, output format, warning, alarm
Control input	Direction, Preset 1, Preset 2
Alarm output	Alarm bit
Status LED	Green = ok.; red = alarm
Connection	Cable radial or axial Conin radial or axial, ccw
Page	138

AC 110 - BiSS / SSI

- Hollow shaft up to 50 mm
- Singleturn up to bis 17 Bit

Application Examples for Encoders

Encoder Applications:

- Packaging industry
- Food industry
- Medical technology
- Elevators
- Conveyor systems
- Robotics
- Cranes
- Positioning control
- Electronics
- Baggage conveyor systems
- Metalworking
- Motors
- Servo motors
- Vector drives
- Mechanical engineering
- Turning machines
- Stamping machines
- Bending machines
- Welding systems
- Sawing machines
- etc.

Application Examples with Encoders

Application Examples with Motor Encoders

Incremental Encoders

Incremental encoders are sensors capable of generating signals in response to rotary movement. In conjunction with mechanical conversion devices, such as rack-and-pinions, measuring wheels or spindles, incremental shaft encoders can also be used to measure linear movement. The shaft encoder generates a signal for each incremental change in position.

With the optical transformation, a line-coded disc made of metal, plastic or glass and positioned on a rotary bearing interrupts the infra red light ray emitted by gallium arsenid sender diode. The number of lines determines the resolution, i.e. the measuring points within a revolution. The interruptions of the light ray are sensed by the receptor element and electronically processed. The information is then made available as a rectangular signal at the encoder output.

Examples for typical applications of incremental encoders:

- | | |
|-----------------------------------|----------------------|
| ■ Door closing devices for trains | ■ Ultrasonic welding |
| ■ Desktop robots | ■ Screwing machines |
| ■ Lens grinding machines | ■ Labelling machines |
| ■ Plotters | ■ x/y indication |
| ■ Testing machines | ■ Analysis devices |
| for optical waveguides | ■ Drilling machines |
| ■ Scattering machines | ■ Mixing machines |
| ■ Tampon printing machines | |

Hollow shaft

MOUNTING NECESSITIES

In order to be able to compensate an axial and radial misalignment of the shaft, the encoder flange must not be fixed rigidly. Fix the flanges by means of a stator coupling (e.g. hubshaft with tether) as torque support (see "Accessories") or by means of a cylindrical pin:

Dimensions in mm also apply for shaft-Ø 10 or 14

Mounting = D, F (Clamping shaft)

Preparation of the machine flange ¹

(all mounting versions):

In the machine flange a straight pin must be installed (diameter 4x16 resp. 4x20, DIN 6325).

This pin is required as a torque support.

¹ Or as an option: stator coupling as torque support

Dimensions in mm also apply for shaft-Ø 10 or 14

Mounting = E (Blind shaft)

Preparation of the drive shaft

(only in mounting = E):

The drive shaft must be provided with a threaded bore M 4 x10:

This bore accepts the fastening screw of the shaft encoder.

Incremental Shaft Encoders Type RI 76 TD

Industrial types

Hollow shaft

SHAFT CONNECTION

Shaft fixing is done through a clamping ring either on the flange or cap side. As a rule, flange side clamping is better for smaller motors as the available shaft stub is correspondingly shorter.

On the other hand, cap side clamping is easier when there is sufficient shaft length available.

MOUNTING NECESSITIES

In order to compensate for axial and radial shaft eccentricity as well as any angle offset, the encoder flange must not be rigidly mounted. Please mount the flange with a flexible stator coupling (e.g. hubshaft with tether) as torque support.

There are two flexible mounting plates:

- A flexible hubshaft with tether (A) for higher levels of play and lower requirements for accuracy.
- A rigid hubshaft with tether (N) for reduced play and rigid connection with reduced swing angle. This is suitable in the case of higher accuracy and dynamics requirements.

TECHNICAL DATA electrical

Incremental Shaft Encoders

Type RI 80-E

Industrial types

Hollow shaft

- Incremental Output
- 30...45 mm hollow shaft
- Rugged mechanical design
- Unbreakable disc
- Integrated diagnostic system
- Wide voltage range 5 ... 30 V

The central element of the RI80-E is the latest Hengstler OptoAsic technology, which offers the following key benefits:

- Highest EMC immunity
- Outstanding reliability by reduced number of components and integrated diagnostics system
- Aging compensation by integrated LED light regulation
- Integrated monitoring of pollution, disk damage, LED lifetime, temperature

A robust and generously dimensioned mechanical design ensures long maintenance free operation.

The RI80-E is ideally suited for applications like:

- Geared Elevators
- Asynchronous Motors
- Industrial Machinery

EX-CLASSIFICATION

The incremental shaft encoder is available in explosion proof design with explosion proof enclosure "d" under RX 70 and RX 71 (stainless steel). The PTB has assured with the Declaration of Conformity that the RX 70 / 71 meets the requirements of safety and health according to EN 50014 and EN 50018. Therefore it is approved in explosive areas, code „Ex II 2 G/D E Ex d II C T4/T6 IP65/ IP66 135°C resp. 85°C“. For applications under tough environmental conditions and food industry the stainless steel version RX 71 is available.

T6 = Highest permissible surface temperature +85°C (max. speed = 6000 U/min⁻¹)
 T4 = Highest permissible surface temperature +130°C (max. speed = 10000 U/min⁻¹)

Absolute Shaft Encoders

Absolute shaft encoders, also known as shaft-angle encoders, are by no means used only to detect angular positions. They are also suitable for linear movements that can be converted into rotary movements by a toothed belt, drive pinion, or wire winch.

The special feature of absolute shaft encoders is that they assign a unique, digitally encoded signal to each individual measured increment. The method of transducing prevents erroneous readings, whether by a power failure, or by a transient malfunction. After the encoder is switched on again, or power is restored, the position can be read out. It is not necessary to move to a reference position, as it is for shaft encoders of the incremental type.

Examples of application for absolute encoders

- | | |
|-------------------------------|-----------------------------|
| ■ overhead support robots | ■ packaging machinery |
| ■ ventilation flaps | ■ extruders |
| ■ spinning machines | ■ folding machines |
| ■ conveyor belts | ■ printing machines |
| ■ cam controllers | ■ high lift storage systems |
| ■ injection moulding machines | ■ stamping machines |

AC 36 - BiSS / SSI

- Compact design for single or multiturn
- Interfaces: standard SSI, expanded SSI mode or BiSS
- Use of sine / cosine signals for fast control tasks possible

PRELIMINARY

APPLICATIONS

TECHNICAL DATA mechanical

Absolute Shaft Encoders ACURO industry

Type AC 36
BiSS / SSI

- Overall length 36 mm
- For equipment engineering and industry
- Up to 17 Bit singleturn and 12 Bit multiturn
- Hollow shaft 6 mm
- +100°C operating temperature
- 10 000 rpm continuous operation
- Optical encoder with a true geared multiturn
- SSI or BiSS interface
- Option Sinus 1Vss
- 500kHz bandwidth

The AC 36 is an absolute optical encoder with a true geared multiturn, optical sensing technology and 36 mm diameter. Equipped with a solid-shaft the AC 36 is mechanical compatible with all common inkremental encoders. The compact design allows to replace the adequate incremental encoders directly. As a result the technical facilities of absolute encoders can be used for the first time in equipment engineering and also in medical engineering. The mechanical design consists of two ball bearings supported mechanical shaft assembly. The AC 36 complements the **ACURO-industry** series with small frame sizes and the same performance as 58 mm versions.

BiSS-Interface

Unique within his class the AC 36 provides fully digital position data up to 17 bit (singleturn) and 12 bit (multi-turn) over the bidirectional synchronous interface with a variable clock rate up to 10 MHz. This corresponds a singleturn resolution of more than 130 000 mesured steps. Backward compatibility is realized through the SSI interface together with 2048 sine -cosine periods per revolution.

Integrated diagnostic system

The AC 36 is based on latest OptoAsic technology with an advanced diagnostic concept. A continous plausibility check controls the internal signal processing for each increment. A code check guarantees that the encoder signal represents bit by bit the mesured rotation. Also the operating temperature of the encoder can be measured, read out and monitored over warn and alarm bits with 8 bit resolution (1°C). Monitoring and controlling of the operating temperature ensures a maximum lifetime of the LED. Eventual failures are indicated early over warn bits.

Housing diameter	37.5 mm
Protection class shaft input	IP 64
Protection class housing	IP 64
Flange	pilot flange
Shaft diameter	6 mm
Max. speed	Continuous 10 000 min ⁻¹ , short term 12 000 min ⁻¹
Starting torque	0.01 Nm
Moment of inertia	2.5 x 10 ⁻⁶ kgm ²
Shock resistance DIN EN 60068-2-27	1 000 m/s ² (6 ms)
Vibration resistance DIN EN 60068-2-6	100 m/s ² (10 ... 2 000 Hz)
Operating temperature	-25...+100 °C
Storage temperature	-15...+85 °C (because of packing)
Weight approx. ST/MT	80 g / 130 g

TECHNICAL DATA electrical

Supply voltage	5 V, -5 % / +10%
Max. current w/o load ST/MT	50 mA / 100mA
Interface	Standard SSI or BiSS
Lines / drives	Clock and Data / RS422
Output code	Gray
Resolution singleturn	13 Bit - 17 Bit
Resolution multiturn	12 Bit
Incremental signals optional	Sinus - Cosinus 1Vss
Number of pulses	2048
3dB limiting frequency	500 kHz
Alarm output	Alarm bit (SSI Option) warning bit and alarm bit (BiSS)
Connection	Cable axial or radial

S0 ... S16 Data bits for resolution per revolution

M0 ... M11 Data bits for number of revolutions (only for multiturn)

¹ Options (Parity bit, alarm and parity bit, zero bit) on request

² W: from this data bit on the data iteration for multiplex starts

³ Parity bit :Even Parity (The parity bit expands the data bits to an even number of 1-bits).
(Option)

⁴ Alarm bit: is set to "1" when over temperature, under temperature, disc breakage and defect LED

SYNCHRONOUS-SERIAL TRANSFER (SSI)

Synchronous readout of the encoder data is according to the clock rate given by the SSI-counterpart.

The number of clock rates is determined by the type of encoder (singleturn resp. multiturn) and the configuration of the special Bits as defined.

For multiple transactions (the stored value is readout several times successively) a fixed clock rate per transaction must be kept (for singleturn 13 resp. 14 clocks, for multiturn 25 resp. 26 clocks).

- In the rest position, when the last clock brush has passed by more than 30µs, the data output is logically at "1".
- With the first descending clock edge the encoder data and the special bits are loaded in the shift register of the encoder interface.

- With each ascending clock edge the data bits are serially readout, beginning with the MSB.

- At the end of the data transfer the data output is set to logically "0" for approx. 20µs.

If within these 20µs a further clock brush reaches the encoder interface, the already transferred data is readout once again.

This multiple transfer of the same data makes it possible to recognize transfer errors.

- After the 20µs the data output goes to its rest position, logically "1". Subsequently new encoder data can be readout.

PIN ASSIGNMENT Conin & Cable

Cable	Flange connector	Signal
brown ³	1	0V (supply voltage)

- Gray or Binary code
- Encoder monitoring

TECHNICAL DATA mechanical

Housing diameter	58 mm
Protection class shaft input	IP 64 or IP 67
Protection class housing	IP 67 with ST, IP 64 with MT (IP 67 optional)
Flange	Synchro flange, clamping flange, hubshaft with tether, square flange
Shaft diameter	Solid shaft 6 mm, 10 mm; hub shaft 10 mm, 12 mm
Max. speed	Continuous 10 000 min ⁻¹ , short term 12 000 min ⁻¹
Starting torque	≤ 0.01 Nm
Moment of inertia	3.8 x 10 ⁻⁶ kgm ²
Spring tether (hollow shaft)	
Tolerance axial	±1.5 mm
Tolerance radial	±0.2 mm
Max. shaft load	axial 40 N / radial 60 N
Shock resistance DIN EN 60068-2-27	1 000 m/s ² (6 ms)
Vibration resistance DIN EN 60068-2-6	100 m/s ² (10 ... 2 000 Hz)
Operating temperature	-40 ... 100 °C
Storage temperature	-40 ... 85 °C
Weight approx. ST/MT	350 g / 400 g

TECHNICAL DATA electrical

Supply voltage	DC 10 – 30 V
Max. current w/o load ST/MT	200 mA / 300 mA
Interface	Parallel
Output code	Binary, Gray, Gray Excess
Resolution singleturn	10 – 14 Bit, Gray Excess: 360, 720 increments
Resolution multiturn	12 Bit
Linearity	±1/2 LSB
Output current	30 mA per Bit, short-circuit-proof
Alarm output	NPN o.c. Max 5 mA
Control inputs	Latch, Direction, Tristate with ST, Tristate with MT
Connection	Cable, axial or radial Conin 17 pole, axial or radial Sub-D 37 pole

Note: preset key only with MT

DIMENSIONAL DRAWINGS

see chapter “Dimensional drawings ACURO industry”, starting page 142

DATA OUTPUT LEVEL

Supply voltage U_B	DC 5 V - 5 % +10 %	DC 10 - 30 V
Output level High	$\geq 3.5 \text{ V (30 mA)}$ $\geq 3.9 \text{ V (10 mA)}$	$\geq U_B - 2.2 \text{ V (30 mA)}$ $\geq U_B - 1.8 \text{ V (10 mA)}$
Output level Low	$\leq 1.6 \text{ V (30 mA)}$ $\leq 1.2 \text{ V (10 mA)}$	$\leq 1.6 \text{ V (30 mA)}$ $\leq 1.2 \text{ V (10 mA)}$
Rise time (1.5 m Cable)	$\leq 0.1 \mu\text{s}$	$\leq 0.2 \mu\text{s}$
Drop time (1.5 m Cable)	$\leq 0.05 \mu\text{s}$	$\leq 0.1 \mu\text{s}$

Control inputs ¹:

Input	Level logical (physical)	Function
Direction	1 (+ U_B or open) 0 (0 V)	ascending code values when turning clockwise (cw) descending code values when turning clockwise (cw)
Latch	1 (+ U_B or open) 0 (0 V)	encoder data continuously changing at output encoder data stored and constant at output
Tristate (with singleturn)	1 (+ U_B or open) 0 (0 V)	outputs active outputs at high impedance (Tristate mode)
Tristate (with multiturn)	1 (+ U_B) 0 (0 V or open)	outputs at high impedance (Tristate mode) outputs active

¹ Typical actuating delay time 10 μs with push-pull selection; when selected via O.C., an external pull-down resistor (1 K Ω) is required

TECHNICAL DATA mechanical

- Compact design: 59 mm length for single or multiturn
- Aids for start up and operation:
diagnostic LED, preset key with optical response, status information
- Parameterization: Resolution, code type, direction, output format, warning, alarm
- Parameters can be stored in a non-volatile memory

Housing diameter	58 mm
Protection class shaft input	IP 64 or IP 67
Protection class housing	IP 64 (IP 67 optional)
Flange	Synchro flange, clamping flange, hubshaft with tether, square flange
Shaft diameter	Solid shaft 6 mm, 10 mm; hub shaft 10 mm, 12mm
Max. speed	12 000 min ⁻¹ (short term), 10 000 min ⁻¹ (continuous)
Starting torque	≤ 0.5 Ncm
Moment of inertia	3.8 · 10 ⁻⁶ kgm ²
Spring tether (hollow shaft)	
Tolerance axial	±1.5 mm
Tolerance radial	±0.2 mm
Max. shaft load	axial 40 N / radial 60 N
Vibration resistance (IEC 68-2-6)	100 m/s ² (10 - 500 Hz)
Shock resistance (IEC 68-2-27)	1000 m/s ² (6 ms)
Operating temperature	-40...+100 °C
Storage temperature	-40...+85 °C
Material shaft	Stainless steel
Material housing	Aluminium
Weight approx. ST/MT	260g/ 310g

TECHNICAL DATA electrical

Supply voltage	DC 10 - 30 V
Max. current w/o load ST/MT	max. 250 mA
Interface	SSI programmable
Lines / drivers	Clock and Data / RS422
Output code	Binary or Gray
Resolution singleturn	10 - 17 Bit
Resolution multiturn	12 Bit
Parameterization	Resolution, code type, direction, output format, warning, alarm
Control input	Direction, Preset 1, Preset 2
Alarm output	Alarm bit
Status LED	Green = ok; red = alarm
Connection	Cable radial or axial Conin radial or axial, ccw

RECOMMENDED DATA TRANSFER RATE FOR SSI

The max. data transfer rate depends on the cable length.

For Clock/ Clock and Data/ Data please use twisted pairs. Use shielded cable.

Cable length	Baud rate
< 50 m	< 400 kHz
< 100 m	< 300 kHz
< 200 m	< 200 kHz
< 400 m	< 100 kHz

SYNCHRONOUS-SERIAL TRANSFER (SSI)

A clock brush is applied at the SSI interface, causing the encoder data to be serially clocked out. With each new clock brush (min. interval 30 ms) new data is read-out.

The following main parameters are programmable:

- **Preset:** Software-Preset and via input/pushbutton settable presets (can be inactivated)
- **Offset:** Relative shifting of actual encoder value.
- **Scaling:** The actual value of the encoder is multiplied with the factor < 1.
Direct entry, increments per measuring distance or per revolution.

- **Direction of rotation:** Can be changed via software or input (can be inactivated)
- **Output formats SSI:** Tree format or standard format (MSB oriented)
- **Output code:** The choices are Gray or binary code, integer or two's complement representation. Selection of significant bit between 16 and 24 Bit.

In addition, programming of max. 7 status bits is possible:

- up to 4 warning positions
- overspeed
- encoder standstill
- parity
- encoder error
- direction of rotation

PROGRAMMING WITH SSI

To program the absolute encoder you require a PC, the software WinSSI and the adapter cable.

The encoder is connected to the power supply and the serial interface of your PC with the adapter cable.

Using the menu-assisted programme you can then configure the encoder according to the parameters you require.

OUTPUT FORMATS SSI

MSB-oriented Multiturn

GENERAL INFORMATION

TECHNICAL DATA mechanical

Absolute Shaft Encoders

Type AC 110

ACURO industry

BiSS / SSI

- Same electrical performance as ACURO industry AC 36 and AC 58 versions
- Robust bearings for long life
- Hollow shaft up to 50 mm
- Absolute singleturn
- Revolution 11-17 Bit
- SSI or BiSS - Interface
- Optional: Sine-Cosine 4096 increments
- DC 5 or 10 - 30 V
- Integrated diagnostic system

HENGSTLER OPTOASIC Technology

The central Element of the ACURO AC110 is the latest Hengstler OptoAsic technology, which offers the following key benefits.

- Outstanding reliability by reduced number of components and integrated diagnostics systems
- Aging compensation by integrated LED light regulation
- Integrated monitoring of:
 - Pollution
 - Disk damage
 - LED lifetime
 - Temperature

The ACURO AC110 is ideally suited for applications like:

- Gearless drive
- Gearless elevators
- Industrial Machinery

Housing diameter	110 mm
Shaft diameter	up to 50 mm
Protection class housing	IP 50 or IP 64
Protection class shaft	IP 50 or IP 64
Max. speed	IP 50: 3 600 min ⁻¹ IP 64: 1 500 min ⁻¹
Spring tether (hollow shaft)	
Tolerance axial	± 0.5 mm
Tolerance radial	± 0.05 mm
Vibration resistance (IEC 68-2-6)	100 m/ s ² (10 - 500 Hz)
Shock resistance (IEC 68-2-27)	1000 m/ s ² (6 ms)
Operating temperature	-20...+70°C
Storage temperature	-50...+80°C
Material Shaft	Aluminium
Material Housing	Stainless steel
Weight approx.	1000g

Type AC 110

ACURO industry

BiSS / SSI

TECHNICAL DATA

electrical

Supply voltage	DC 5 V (–5 %/ +10 %) or DC 10-30 V
Max. current w/o load ST/MT	120 mA
Lines / Drives	Clock and Data / RS422
Output code	Binary or Gray
Resolution singleturn	10 - 17 Bit
Incremental signals	Sine - Cosine 1 V _{ss}
No. of increments	4 096
3 dB limiting frequency	500 kHz
Absolute accuracy	± 35"
Repeatability	± 7"
Alarm output	alarm bit (SSI), warning bit and alarm bit (BiSS)
Connection	Cable radial

DIMENSIONAL DRAWINGS

PIN ASSIGNMENT

Colour cable	Cable connector	Signal
brown ³	1	0V (supply voltage)
pink	2	Data
yellow	3	Clock
	4	N.C.
blue	5	Direction ¹
	6	N.C.
	7	N.C.
white ³	8	DC 5 ³ /10 - 30 V
	9	N.C.
grey	10	Data
green	11	Clock
black	12	0V-signal output ²
Screen		Shielded with housing

¹ Direction: + U_B or unconnected = ascending code values with rotation cw
 0 V = descending code values with rotation cw

² Connected with 0 V in the encoder. Use this output to lay Direction on logical "0" if required.

³ Notice: when supply voltage = DC 5V → max. cable length 10 m

RECOMMENDED
DATA TRANSFER RATE
WITH SSI

The max. data transfer rate depends on the cable length.
 For Clock/ Clock and Data/ Data please use twisted pairs. Use shielded cable.

Lead length	Baud rate
< 50 m	< 400 kHz
< 100 m	< 300 kHz
< 200 m	< 200 kHz
< 400 m	< 100 kHz

Version AC 61 with bus terminal box

Version AC 59 with cable outlet

TYPES

TECHNICAL DATA mechanical

TECHNICAL DATA electrical

- Compact design
- Protection class IP 67
- High corrosion resistance
- Robust design
- Resolution up to 29 Bit (17 Bit ST, 12 Bit MT)
- Connection with cable or with bus terminal box
- Applications:
 - Packaging machine for food and beverage
 - Ship equipment (e.g. cranes, winches, cable laying ships)
 - Offshore - Applications

The absolute stainless steel encoder are available in the Versions AC 59 and AC 61

- AC 59: drawn stainless steel housing, only together with cable outlet, no access to control elements
- AC 61: massive turned housing, possible with cable or bus terminal box, access to control elements (DIP switch, Reset switch)

The stainless steel encoder is available with following interfaces:

- Single- or multiturn with cable radial/ axial and interfaces SSI, BiSS, Parallel, SSI-P, CANopen, CANlayer2
- Single- or multiturn with bus terminal box and interfaces Profibus, CANopen, CANlayer2, DeviceNet, Interbus

Flange	Square flange 63.5 x 63.5 mm
Shaft diameter	10 mm
Protection class (EN 60529)	IP 67
Max. Speed	Short term: 10000 min ⁻¹ , continuous: 6000 min ⁻¹
Torque	< 1 Ncm
Moment or inertia	approx. 20 gcm ²
Max. shaft load	axial 40 N/ radial 60 N
Vibration proof (IEC 68-2-6)	100 m/ s ² (10 - 500 Hz)
Shock resistance (IEC 68-2-27)	1000 m/ s ² (6 ms)
Operating temperature	SSI, BiSS, Parallel, SSI-P: -40...+100°C Profibus, CANopen, CANlayer2, DeviceNet, Interbus: -40...+ 85°C
Storage temperature	-40...+ 85°C
Material Shaft/ Housing	Stainless steel
Weight approx. ST/MT	AC 61: 1088 g, AC 59: 680g

Absolute Shaft Encoders Type AX 70 / 71

Explosion proof

Version AX 70 - Aluminium

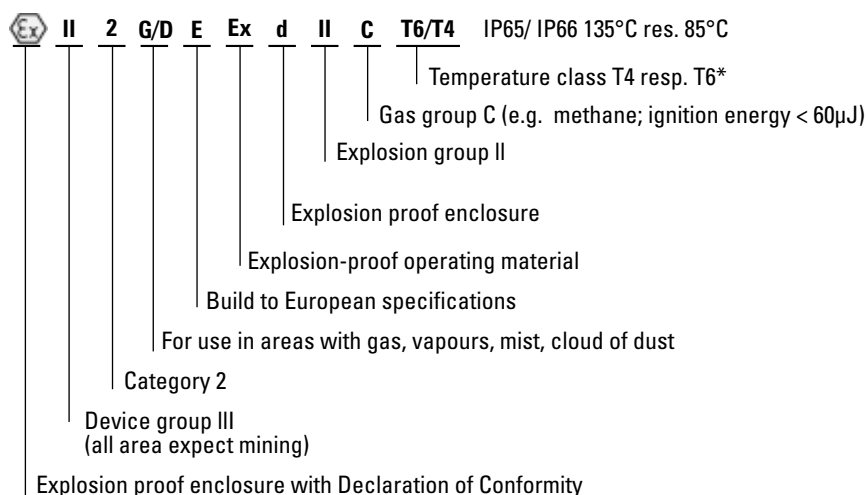

Version AX 71 - Stainless steel

- ATEX certification for gas and dust explosion proof
- Same electrical performance as ACURO industry
- Protection class up to IP67
- Diameter only 70 mm
- Robust design
- Also available with stainless steel
- Resolution up to 29 Bit (17 Bit ST, 12 Bit MT)
- Applications:
 - enamelling production line
 - petro chemistry
 - bottling machines
 - mixers
 - silo works, mills
- Interfaces: SSI, SSI programmable, Profibus, CANopen

EX-CLASSIFICATION

The absolute shaft encoder line ACURO is available in explosion proof design with explosion proof enclosure "d" under AX 70 and AX 71 (stainless steel). The PTB has assured with the Declaration of Conformity that the AX 70 / 71 meets the requirements of safety and health according to EN 50014 and EN 50018. Therefore it is approved in explosive areas, code „Ex II 2 G/D E Ex d II C T4/T6 IP65/ IP66 135°C res. 85°C“. For applications under tough environmental conditions and food industry the stainless steel version AX 71 is available.

T6 = Highest permissible surface temperature +85°C (max. speed = 6000 U/min⁻¹)
 T4 = Highest permissible surface temperature +130°C(max. speed = 10000 U/min⁻¹)

Motor Feedback Systems

Hengstler offers Motor Feedback systems in all performance classes and with the most commonly used interfaces

From modular miniature incremental encoders for **DC and Stepper Motors** in 22 mm diameter up to the absolute AC110 with 50mm hollow shaft Hengstler provides a complete range of Motor Feedback systems.

For asynchronous motors and elevators the offering comprises incremental and absolute hollow shaft encoders in singleturn and multiturn versions. Trend-setting is the Incremental OptoAsic with diagnosis system and integrated interpolation electronic which is for the first time used in RI80-E. This enables resolutions of up to 200 000 pulses for good synchronism of electric machines running at low revs.

For AC Servo Motors there is an extensive range of feedback products available: Brushless resolvers size 10, 15 and 21 uniquely robust and low priced, incremental comcoders for direct block commutation of BLDC motors in low cost modular version or with integrated bearings and resolutions up to 10 000 pulses per revolution.

Your application requires highest precision and dynamics? Than you are on the right track with the Sine-wave encoder S21 and the absolute Acuro-Drive encoder. Latest OptoAsic technology and a true geared multiturn provides obvious advantages regarding performance and reliability. Hengstler offers the Acuro-Drives series with the open, highspeed, digital interface BiSS. With the open source BiSS interface the proprietary lock-in situation with absolute motorfeedback systems is broken up with the benefit of an increasing range of suppliers.

One Size fits all:

No matter whether your servo application requires resolvers, incremental comcoders or absolute Multiturn encoders - the complete range in size 15 with resolver compatible mounting is available from Hengstler. The benefit of this is, that the B-side of the motor can be resolver style and doesn't need to be customized, depending on the feedback. The Feedback type can be selected according to customer demands or required resolution and technology. This helps reducing variation of parts and stock and enables improved delivery times.

Motor Feedback Systems - Kit Encoders for Miniature DC and Stepper Motors

Motor Feedback Systems - Hollow shaft Encoders for Asynchronous & DC Motors

Type	RIS 58-H
Special features	<ul style="list-style-type: none"> ■ harmonic distortion less than 1 % ■ extended temperature range, -40° up to +100 °C ■ 500 kHz sine-wave incremental signal frequency response ■ self-monitoring and error compensation ■ secure against short-circuit and overload
Number of pulses	1 000, 1 024, 2 048, 2 500, 5 000
Technical Data - mechanical	
Shaft diameter	10 mm, 12 mm hollow shaft
Balance tolerances	axial ± 1.5 mm, radial ± 0.2 mm
Max. speed	12 000 min ⁻¹
Torque	≤ 1 Ncm
Protection (EN 60529)	Bearing IP 64, Housing IP 65
General design	as per DIN EN 61010-1
Operating temperature	-40 ... +100 °C
Vibration (IEC 68-2-6)	≤ 100 m/s ²
Shock (IEC 68-2-27)	$\leq 1 000$ m/s ²
Material housing	Aluminium
Connection	Cable axial or radial Conin axial or radial
Size	Ø 58 mm
Weight approx.	270 g
Technical Data - electrical	
Supply voltage (SELV)	DC 5 V / ± 10 %
Max. current w/o load	120 mA
Incremental signals A, B	Sinus-Cosinus 1 V _{ss}
Absolute accuracy	$\pm 35''$
Repeatability	$\pm 7''$
Max. output frequency	500 kHz
Reference signal: R	> 0,4 V (1 pulse / turn)
Page	97

Motor Feedback Systems - Hollow shaft Encoders for Asynchronous & DC Motors

Type	AC 58 - BiSS / SSI	AC 110 - BiSS / SSI
Technical Data - mechanical		
Housing diameter	58 mm	110 mm
Shaft diameter	Hub shaft 10 mm, 12 mm	up to 50 mm
Protection class shaft input	IP 64 or IP 67	IP 50 or IP 64
Protection class housing	IP 64 (IP 67 optional)	IP 50 or IP 64
Flange	Hubshaft with tether	Hollow shaft with tether
Max. speed	Continuous: 10 000 min ⁻¹ , Short term: 12 000 min ⁻¹	IP 50: 3600 min ⁻¹ IP 64: 1500 min ⁻¹
Shaft load	axial 40 N / radial 60 N	
Spring tether (hollow shaft)		
Tolerance axial / radial	± 1.5 mm / ± 0.2 mm	± 0.5 mm / ± 0.05 mm
Shock resistance (IEC 68-2-27)	1 000 m/s ² (6 ms)	1000 m/ s ² (6 ms)

for Miniature DC and Stepper Motors

- Ideal for position and speed sensing in small machines and actuators
- Low power standby mode is ideal for battery powered devices
- Operating frequency to 200 kHz
- Resolution to 512 lines/rev

GENERAL INFORMATION

The type E9 incremental optical encoder provides high performance feedback for precision motion control in a very small package. Its small envelope makes it ideal for instrument axes for position and speed control in mechanisms too small to accept standard encoders. Its high performance, advanced features, and competitive pricing make it the encoder of choice for a broad range of applications.

The E9 optical encoders utilize a patentpending ASIC that integrates all encoder electronics, including the optoelectronic sensors, which enhances reliability and accuracy.

Outputs are quadrature A and B channels with up to 512 lines per rev, an index pulse, unique up/down and rotation direction signals (version 2) or complementary CMOS-compatible (version 1). The E9 also has a low-power standby mode to conserve power in battery-operated applications.

for Miniature DC and Stepper Motors

- Ideal for position and speed sensing in small machines and actuators
- 200 kHz operating frequency
- Resolution to 512 lines/rev

GENERAL INFORMATION

With a total length less than 15mm and a very low mass, the type M9 incremental optical encoder is ideally suited for use on the moving heads of pick-and-place type machines.

The M9 may be used as direct replacements for most Hewlett Packard HEDS-5XXX encoders with no changes to the motor or cable.

The M9 provides high performance feedback for precision motion control in a very small package. Its small envelope makes it ideal for instrument axes for position and speed control in mechanisms too small to accept standard encoders.

Its high performance, advanced features, and competitive pricing make it the encoder of choice for a broad range of applications.

It utilizes an ASIC that integrates all encoder electronics, including the optoelectronics sensors, which enhances reliability and accuracy.

Outputs are single-ended quadrature A and B channels with up to 512 lines per rev plus an index pulse.

Motor Feedback Systems Type M 14

for Miniature DC and Stepper Motors

- Ideal economical feedback device for servo and step motors
- Short axial length and compact 1.5 inch diameter
- Easy "snap-on" installation
- High resolution to 1024 lines/rev and 200 kHz bandwidth
- Drop-in replacement for HP 5540
- CE-qualified

GENERAL INFORMATION

The type M14 of incremental optical encoders provides high performance feedback for precision motion control in a small, low cost package.

Its high performance, advanced features, and competitive pricing make it the encoder of choice for a broad range of applications.

The M14 optical encoder utilizes a patentpending ASIC that integrates all encoder electronics, including the optoelectronic sensors, which enhances reliability and accuracy.

Quadrature A and B channels with up to 1024 lines per revolution and reference pulse are output as single-ended TTL/CMOS compatible signals.

The M 14 can be used as drop-in replacement for HP 5540.

Motor Feedback Systems - Hollow shaft Encoders for Asynchronous & DC Motors Incremental

OVERVIEW

Our hollow shaft encoder industry types are particularly suitable as a motor feedback product for asynchronous- and DC motors.

Due to the partially higher requirements on the operating temperature, there are specially developed high temperature versions (-TD) available, among certain types.

HOLLOW SHAFT ENCODER RI36-H

- Miniature industry encoder for high numbers of pulses (5 .. 3600)
- Hollow shaft (up to 10mm)
- Short overall length
- Easy and quick mounting procedure

There are two different spring tethers available.

Detailed description: Page 60

HOLLOW SHAFT ENCODERS RI58-D, TD, -G, TG

- Flexible hollow shaft design up to diameter 14 mm (-D,TD)
- 15mm hollow shaft (-G,TG)
- Short overall length
- Easy installation by means of clamping ring or blind shaft
- Operating temperature up to 100°C (RI 58 TD and TG)
- High number of pulses (5 .. 5000) with -D
- Limited number of pulses (4 .. 2500) with TD
- Limited number of pulses (50 .. 2500) with TG

The RI58 hollow shaft family offers a broad spectrum of mounting possibilities and is the right choice for all drive systems because of its high temperature option.

Detailed description of RI 58-D, TD: Page 66

Detailed information of RI58-G, TG on request

HOLLOW SHAFT ENCODER RI76TD

- Through hollow shaft with up to diameter 42 mm
- Short overall length with an outside diameter of only 76 mm
- Easy installation by means of clamping ring
- Operating temperature up to 100 °C

Different Mounting options are available.

Detailed description: Page 72

Motor Feedback Systems - Hollow shaft Encoders

for Asynchronous & DC Motors

Absolute

OVERVIEW

Our absolute hollow shaft encoders of the Acuro family are particularly suitable as a motor feedback product for asynchronous- and DC motors, with special requirements concerning dynamics and absolute positioning. Besides the standard interfaces BiSS and SSI they offer additional Sin Cos of output signals.

ABSOLUTE HOLLOW SHAFT ENCODER AC58

- Absolute standard industry encoder with high resolution
- Hollow shaft (up to 12 mm)
- Short overall length
- Easy and quick mounting procedure

The AC58 offers all characteristics of the Acuro family in one universal design.

Detailed description: Page 111

ABSOLUTE HOLLOW SHAFT ENCODER AC110

- Robust absolute industry encoder with high resolution
- Hollow shaft (up to 50mm)
- Short overall length
- Easy and quick mounting procedure

The AC110 offers all characteristics of the Acuro family for applications with large shaft diameters (elevators, direct drives).

Detailed description: Page 147

for AC Synchronous & BLDC Motors

- Incremental + commutation
- Practically no speed limitation, since up to 12000 RPM
- Very good dynamic behaviour through low moment of inertia of rotor and its minimal influence on the motor
- Very good drive stiffness since no coupling is used
- Compact size
- Excellent price-performance ratio
- Increased temperature range, -40 to +120°C
- Incomparable shaft play tolerances (to 0.7 mm axial)
- Better frequency, 200 KHz
- Flexibility, since the user can integrate in all actual motor sizes
- Simple mounting and adjustment since encoders come aligned and gapped

NUMBER OF PULSES

for AC Synchronous & BLDC Motors

- Compact hollowshaft motor encoder, ideal for BLDC, DC-Servo and Stepper feedback
- Resolver compatible mounting
- Resolution up to 2048 ppr
- Operating temperature up to 120 °C
- Frequency response to 300 kHz
- Mounting depth 22.4 mm

GENERAL INFORMATION

The type F10 encoder provides high performance, cost effective feedback for stepper and servo motor applications. The F10 offers compact package dimensions and flying leads for a low-profile installation. A size 10 servo ring allows easy mounting and replacement of pancake resolvers with high tolerance to motor shaft movement and 360 degrees of adjustment to align the signal outputs to the shaft position.

NUMBER OF PULSES

1024, 2048;

- Stator coupling
- External diameter 40 mm
- Cable plug-in radial/axial

GENERAL INFORMATION

The type F14 offers compact package dimensions and a pluggable pin header. A compliant tether allows easy mounting with high tolerance to motor shaft movement and 30 degrees of adjustment to align the signal outputs to the shaft position.

A superior optical configuration allows for generous internal component clearance eliminating potential damage at high ambient operating temperatures. High temperature rated grease is standard for extended bearing life. No special tools are required for installation.

The use of optically-generated signals for Brushless DC (BLDC) servo control provides higher accuracy and reliability by eliminating the hysteresis found in competitive units with hall effect sensors, ensuring maximum performance and reliability of the servo system.

GENERAL INFORMATION

TECHNICAL DATA mechanical

Absolute Motor Feedback Systems Type AD 36 for AC Synchronous & BLDC Motors

- For brushless servo motors
- Resolver size 15 compatible
- Through hollow shaft 8 mm
- 19 Bit Singleturn + 12 Bit Multiturn
- + 120°C operating temperature
- 10.000 rpm continuous operation
- Geared optical multiturn
- SSI or BiSS interface
- Sinewave 1 Vpp
- Bandwidth 500kHz

The AD36 is an absolute encoder with a true geared Multiturn, optical sensing technology and 36 mm diameter. Unique is the through hollow shaft which enables an assembly that is compatible with resolver size 15. The mechanical design consists of two ball bearings and a flexible torque support. The AD36 complements the *ACURO-DRIVE* series and is appropriate for use within BLDC servo motors with small frame sizes.

Fully digital control loop

The new and completely digital OptoAsic technology enables the transition to a truly digital drive system. The conventional absolute encoders still have analog sine wave signals for the feedback of speed and position data. The AD36, however, provides fully digital position data up to 19 Bit (Singleturn) and 12 Bit (Multiturn) over the **BiSS** interface with a variable clock rate up to 10 MHz. **BiSS** is the only open high speed bidirectional sensor interface available on the market.

Backward compatibility to most of the existing drives is realized through the variant with SSI interface together with 2048 sine –cosine periods per revolution.

Integrated diagnostic system

The AD36 has an integrated diagnostic system that controls and regulates the internal signals. Maximum motor uptime is achieved through the pre warning in case of any system error or aging effects well before they affect the function of the encoder. A code plausibility check guarantees that the output data represents always the true position. Also the operating temperature can be measured and read out with 8 bit resolution. If programmable limits are exceeded or under run this is indicated over warn and alarm bits.

Housing diameter	37,5 mm
Shaft diameter	8 mm
Protection class housing	IP 40
Protection class shaft	IP 40
Max. speed	Continuous operation 10 000 min ⁻¹ Short term operation 12 000 min ⁻¹
Torque	0,01 Nm

Absolute Motor Feedback Systems Type AD 58

for AC Synchronous & BLDC Motors

- For brushless servo motors
- All-digital and highspeed
- + 120°C operating temperature
- 10.000 rpm continuous operation
- Geared optical multiturn
- SSI or BiSS interface
- Option Sinewave 1 Vpp: Harmonic distortion less than 1%
- Bandwidth 500kHz

GENERAL INFORMATION

The AD58 is an absolute encoder with a true geared Multiturn and optical sensing technology: The mechanical design consists of two ball bearings and a flexible torque support. The AD58 is ideally suited for integration into BLDC servo motors for demanding applications such as CNC precision machining and printing in professional quality. Through its low current consumption the AD58 is contributing to lowering cost of ownership.

Fully digital control loop

The new and completely digital OptoASIC technology enables the transition to a truly digital drive system. The conventional absolute encoders still have analog sine wave signals for the feedback of speed and position data. The AD 58, however, provides fully digital position data up to 22 Bit (Singleturn) and 12 Bit (Multiturn) over the BiSS interface with a variable clock rate up to 10 MHz. This corresponds to a singleturn resolution of more than 4 million measured steps.

Motor Feedback Systems - Sine-wave Type S21 for AC Synchronous & BLDC Motors

GENERAL INFORMATION

- Wide operating temperature range of -15°C up to $+120^{\circ}\text{C}$, therefore optimum use of motor capacity
- High limiting frequency with excellent signal quality, allowing highest peak speeds and reduced non-productive time wastage
- Excellent immunity to interference (EN 61000-4-4, Class 4)
- High functional safety due to signal control and system monitoring (under-voltage, pollution, disc damage, end of LED service life)
- High signal quality through control and error compensation

The S21 has been constructed in line with the International Standard Resolver dimension 21, i.e. 2.1" (approx. 53 mm) and as a result is also suitable for smaller sized motors. The simplicity of connection rounds off advantages of the S21. The integrated cable plug connector combines the advantages of the plug with those of a cable connection. This leads to a fast, economical and space-saving installation.

TECHNICAL DATA electrical

General design	as per DIN EN 61010-1, protection class III, contamination level 2, over voltage class II
Supply voltage	DC 5 V $\pm 10\%$ (SELV)
Max. current w/o load	120 mA

Motor Feedback Systems - Sine-wave Type S21 for AC Synchronous & BLDC Motors

S21 SIGNALS

The incremental signals A and B and the zero signal R are differential voltage signals. The differential signal level is 1Vpp. The zero signal appears once per revolution and reaches its maximum value at the angle where the amplitudes of A and B Signals are equal. The coarse tracks C and D deliver one sinewave period per revolution and are utilized to determine the absolute rotor position of Brushless DC motors for startup commutation. All signals have a DC offset of 2.5 V.

S21 SIGNAL QUALITY

The quality of the servo loop is determined to a large extent by the absence of harmonics in the encoder's sinewave signals, particularly at low speed. In order to achieve high interpolation factors in the sequencing control, the incremental sinewave signals A and B are available with a harmonic distortion significantly under 1% throughout the specified temperature range. This delivers excellent synchronism and a high level of positional accuracy with servo axes.

Tapered solid shaft with mounting support	0 548 011
Tapered hollow shaft	on request

- Provide accurate, absolute position feedback
- Rugged and able to withstand high shock and vibration levels
- Impervious to most industrial contaminant and temperature extremes
- High temperature up to 220°C
- Operation in non electroconductive liquids possible
- Maintenance-free (brushless)
- Aging resistant (no electronic components)
- Low-priced

Application fields:

- Servo drives
- Medical technologie (sterilisable)
- Robots
- Gearless drives
- Military engineering

Brushless resolvers are the ideal rotor position indicators for the position feedback of brushless motors, robots or direct drives. They are robust, reliable and suitable for high operating temperatures until 155 °C and resistant to most process liquids, contaminations, radiation and EMC-Interferences as well as highly shock-proof and vibration-resistant. These resolvers deliver absolute position information and can be combined with low cost integrated circuits, to generate an up to 16 bit digital position-value or, to produce an emulated incremental encoder output signal, as well as direction and analogue speed-signals.

DIMENSIONAL DRAWINGS

MODELLÜBERSICHT

Type (model)	AG	P	U maximal

31BRCX	31.8 mm	77.5 mm	40.0 mm
55BRCX	31.8 mm	139.7 mm	92.7 mm

Ordering information:

Since resolvers are produced according to special applications, the production takes place only in big batch sizes. For replacement needs, please contact your drive-manufacturer.

DIMENSIONAL DRAWINGS

HOUSED RESOLVERS SERIES R 11

- Brushless construction
- Maintenance free
- Able to withstand high shock and vibration levels
- Impervious to most industrial contaminant and temperature extremes
- High temperature up to 115°C

Housed Resolvers distinguish themselves through high reliability in harsh environments, operating temperatures up to 155 °C and high shock resistance. Based on their brushless design they are the ideal supplement to brushless servo motors. The accuracy as well as the repeatability are excellent. These resolvers are equipped with precision bearings and are maintenance-free. They are also the shortest resolvers, that are available on the market.

DIMENSIONAL DRAWINGS

HOUSED INDUSTRY RESOLVERS SERIES R 25

- Rugged housing with IP 65
- Able to withstand high shock and vibration levels
- Impervious to most industrial contaminant and temperature extremes
- High temperature up to 125°C
- Flange- and servo-mount styles

Industry resolvers possess especially robust casings with protection class IP 65. They are especially suitable for the use with high temperatures (+125 °C in long-term operation), and offer extraordinary values of vibration and shock resistance (40g as well as 200g), as well as noise immunity. The user is flexible in the application because of the corrosion resistant versions for integration or extension , the connection could easily be done by Standard MS-style connectors. The accuracy has a spread of ± 7 up to ± 200 arc-minutes.

Dimensions in inch, dimensions in mm in []

Accessories

Problem solutions from a single source.

Our wide range of accessory modules completes the encoder programme.

With these modules, we offer you an optimum means of meeting your application demands.

for absolute encoder connection

- Large, 6-digit, 14 mm high LED display
- Predetermined offset
- 2 variable limit values
- Easy direct selection by 2 function keys
- Relay outputs with change-over contacts
- Chain value or absolute value indication
- npn/pnp programming of inputs
- Synchronous Serial Interface

APPLICATION FIELDS

Indication of infeed values, lengths, support- or machine positions, totalizing values etc. The coupling to the machine may be done with an absolute encoder with SSI-Interface from the wide and comprehensive Hengstler program of types AC 58.

DISPLAY

Section A: shows the actual count value when in counting mode, and the changeable parameters when in programming mode.

Section B: LED indicators showing the active output signal, and in programming mode indicating the changeable parameter.

PROGRAMMING

Programming of signo 727 is possible by direct access and in the 3 operating levels

Direct access: Limit values are set with the function keys F1, F2

Operating level 1: Set value

Operating level 2: Includes absolute informations of the encoder

Operating level 3: Includes system parameters, which are normally programmed during start-up procedure only.

Unauthorized programming of the signo 727 is prevented by a control input, which can lock the operating levels.

Position indicator signo 727 SSI

for absolute encoder connection

Connectors

NUMBERING OF PINS

Clockwise system:

A connector with pin contacts, which is numbered clockwise, and the corresponding counter-plug connector with socket contacts (which consequently must be numbered counter-clockwise), is called right-turning.

Counter clockwise system:

A connector with pin contacts, which is numbered counter clockwise, and the corresponding counter-plug connector with socket contacts (which consequently must be numbered clockwise), is called left-turning.

PLUG

A connector with coupling nut is called plug, without regard to its pin or socket contacts.

COUPLING

A connector with outer thread is called coupling without regard to its pin or socket contacts.

CONNECTOR

A connector is fastened to the encoder or the machine's housing, has an outer thread (like the coupling) and is available with pin or socket contacts.

CONTACTS

Measuring Wheels

GENERAL ASPECTS

In order to prevent the result being distorted when the shaft encoder is driven by a measuring wheel make sure that the slip is as small as possible. When selecting the tread (surface), take into account the structure, stretchability, thickness, and resistance to being carried along of the material being measured.

The slip is also affected by the width of the measuring wheel, the contact pressure, the tension in the material being measured, and the arc of contact. The arc of contact should be as large as possible. The wheel bodies are made of cast aluminium or plastic (as marked).

The position of the measuring wheel should be chosen so that the direction of movement of the material is away from the shaft encoder's bearing point.

GENERAL INFORMATION

Incremental encoders are sensors capable of generating signals in response to **rotary movement**. In conjunction with mechanical conversion devices, such as rack-and-pinions, measuring wheels or spindles, incremental shaft encoders can also be used to measure **linear movement**. The shaft encoder generates a signal for each incremental change in position.

With the **optical transformation**, a line-coded disc made of metal, plastic or glass and positioned on a rotary bearing interrupts the infra red light ray emitted by gallium arsenid sender diode. The number of lines determines the resolution, i.e. the measuring points within a revolution. The interruptions of the light ray are sensed by the receptor element and electronically processed. The information is then made available as a rectangular signal at the encoder output.

Output Signals of Incremental Encoders

OUTPUT SIGNALS

The shaft encoders supply two square wave pulses offset by 90° A and B, and a reference pulse N (zero signal) as well.

In order to suppress spurious pulses, certain output circuits (RS 422 and push-pull) generate inverted signals (\bar{A} , \bar{B} , \bar{N}), such as in models RI 30, RI 36, RI 58, RI 58-H, RI 76-TD and RI 58-D.

The measuring pitch is defined as the value of the distance between two pulse edges of A and B.

EVALUATION

The resolution of a two-channel shaft encoder can be doubled or quadrupled in the subsequent circuitry.

This enables the resolution of a two-channel encoder with 2500 lines per rev. to be increased electronically to 5,000 or 10,000 pulses per revolution (see diagram below).

Encoder Basics

Maximum Speed, Protection Class

SPEED

The maximum permissible speed of a shaft encoder is derived from:

- the **mechanically permissible r.p.m.**,
- the minimum permissible **pulse-edge spacing** of the square-wave output signals of the shaft encoder for the subsequent circuitry, which depends on the tolerance of the phase offset,
- the **functional speed**, which is limited by the pulse frequency.

The mechanically permissible r.p.m. is specified for each shaft encoder among the mechanical characteristics.

In general, the control circuitry does not permit less than a certain **minimum edge spacing** between the square-wave output signal pulses. The minimum pulse-edge spacing is specified for each model of shaft encoder among the electrical characteristics.

The **functional speed** of an encoder is obtained by the equation:

$$n_{\max} = f_{\max} \cdot 10^3 \cdot 60 / Z$$

n_{\max} = maximum functional speed [r.p.m.]

f_{\max} = maximum pulse frequency of shaft encoder, or input frequency of downstream circuitry [kHz]

Z = number of pulses of shaft encoder

PROTECTION CLASS

All encoders of the industrial types RI 30, RI 36, RI 58, RI 58-H, RI 58-D, RA 70-I as well as the absolute encoders ACURO, comply with protection class IP 65 according to EN 60529 and IEC 529, unless otherwise stated.

These specifications are valid for the housing and the cable output and also for plugged in socket connectors. The shaft input complies with protection class IP 64. If however the encoder is mounted vertically, there must be no standing water present at the shaft input and the ball bearings.

In case the standard protection class IP 64 is not sufficient for the shaft input, e.g. with vertical mounting of the encoder, the encoders must be protected by additional labyrinth or pot-type seals.

On request our encoders are also available with protection class IP 67 for the shaft input and for the housing.

Encoder Basics

Examples of Flange Mounting

FLANGE TYPE OVERVIEW

S = Synchro flange

K = Clamping flange

Q = Square flange

R = Pilot flange

SHAFT ENCODERS WITH CLAMPING FLANGE

The shaft encoders with a clamping flange can be installed in following ways:

- by means of various flange adapters (see "Accessories"),
- by means of the clamping flange itself,
- by means of the fastening threads provided on the face,
- by means of an angle bracket (see "Accessories").

The encoder housing is centered by means of the clamping flange.

Flange adapter

Clamping flange

Mounting by fastening threads

Mounting by angle bracket

Encoder Basics

Examples of Flange Mounting

SHAFT ENCODERS WITH SYNCHRO FLANGE

The shaft encoders with synchro flange can be installed in two ways:

- by means of the synchro flange and three clamping eccentrics (see "Accessories"),
- by means of the fastening threads provided on the face.

The encoder is centered by means of the centering collar on the flange.

SHAFT ENCODERS WITH SQUARE FLANGE

The shaft encoders with square flange can be installed in two ways:

- by means of the fastening threads provided on the face,
- by means of an angle bracket.

The encoder is centered by means of the centering collar on the flange.

SHAFT ENCODERS WITH PILOT FLANGE

The shaft encoders with pilot flange can be installed in two ways:

- by means of the fastening threads provided on the face,
- by means of an angle bracket.

The encoder is centered by means of the centering collar on the flange.

Encoder Basics

Examples of Flange Mounting

SHAFT ENCODERS WITH HOLLOW SHAFT (RI 58-D/G)

Mounting of version F, D (Clamping shaft)

- 1 Torque support
- 2 Clamping ring with cross-recess screw
- 3 Straight pin
- 4 Actuating shaft

Mounting of version E (Blind shaft)

- 1 Torque support
- 2 O-ring
- 3 Straight pin
- 4 Actuating shaft with threaded bore
- 5 M4-screw with spring washer
- 6 Cap

SHAFT ENCODERS WITH HOLLOW SHAFT (RI 76, RI 80-E, AC110)

MOTOR SHAFT ENCODERS WITH HOLLOW SHAFT (E9, M9)

1. Place the base plate of encoder onto the motor rear end plate.
2. Install centering tool on motor shaft to center the base plate with respect to the shaft.
3. Install hardware supplied and tighten to secure the base plate. Remove centering tool.
4. Position and mount the encoder housing onto the base plate with its 3x120° bayonet snaps in their corresponding slots on the base plate. Slide the gapping shim between the base plate and the encoder from the side opposite the connector.
5. Place the hex wrench into the codewheel set screw. Tighten the set screw while pushing the codewheel down toward the gapping shim with the wrench.
6. Remove the gapping shim, push down and twist the encoder 30° clockwise to lock it in place.

SHAFT ENCODERS WITH SOLID SHAFT

Connection of solid-shaft encoders to the shaft is by means of a coupling. The coupling compensates for axial movements and lack of alignment between the shaft encoder and the drive shaft, thus preventing excessive bearing loads on the encoder shaft. For further details please refer to chapter "Accessories".

Basics of Incremental Encoders

Outputs - Alarm

OUTPUT CIRCUIT

TECHNICAL DATA

Output	NPN - Open collector
Output load max.	5 mA / 24 V at $U_B = DC\ 5\ V$ 5mA / 32 V at $U_B = DC\ 10-30\ V$
Output level	Output active (failure condition): $L \leq DC\ 0,7\ V$ Output inactive: high impedance (if necessary: get H-level by an external pull-up resistor)
Malfunction indication time	$\geq 20\ ms$

FUNCTION

The rotary encoders are equipped with an electronic monitoring system that reports potential malfunctions via a separate alarm output.

The alarm output can be used for selecting an optical display (LED; for circuit, see above) or the control system (SPC or similar).

Moreover, the alarm outputs of several encoders can be interconnected to a common "systems alarm" by means of a parallel connection. The following errors are indicated:

Category I	Category II	Category III
- damaged disks	- overtemperature	- voltage range $1\ VDC < U < 4\ VDC$
- defective LED	- overload (e. g. due to short circuit)	- voltage drop on the supply lines
- contamination		

Category I malfunctions cannot be corrected; the encoder must be replaced.

Category II malfunctions are detected by means of a thermal monitoring unit in the electronic system. The alarm message is cleared after the cause of temperature increase has been removed.

Category III malfunctions indicate insufficient supply voltage. Also included in this category are transients in the supply voltage, e.g. due to electrostatic discharge, which may distort the output signals.

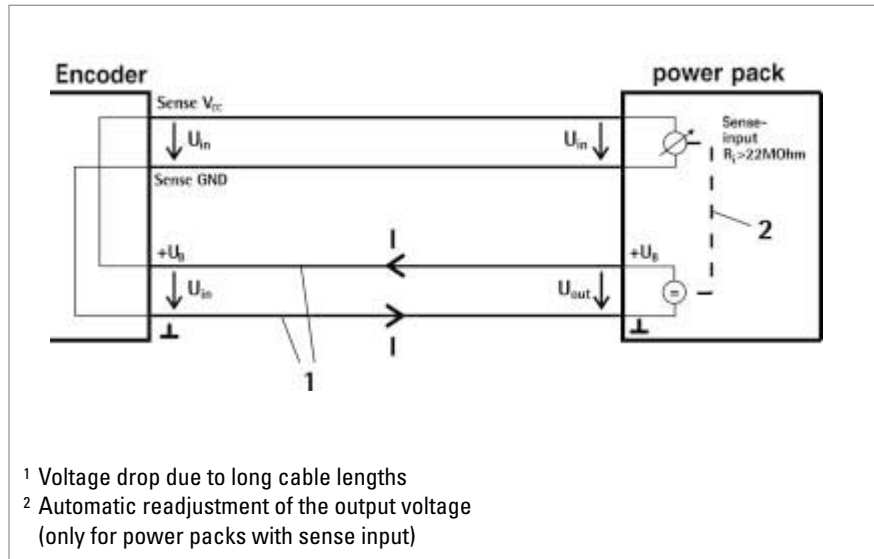

This is corrected by

- readjustment to the correct voltage
- eliminating the cause of disturbance, i.e. by careful arrangement of the cables.

Basics of Incremental Encoders

Outputs - Sense at 5 V RS 422 (T)

OUTPUT CIRCUIT

FUNCTION

The sense wires enable measuring of the actual encoder supply voltage (compensates for voltage drops due to supply current and cable resistance).

Due to the voltage drop in the cables and the voltage supply, the encoder input voltage U_{in} is less than the power pack output voltage U_{out} .

The present input voltage U_{in} is now output to the Sense V_{CC} and Sense GND cables and returns as data to the power pack.

The input resistance R_i on the power pack should amount to at least 22 MOhm so that no voltage drop occurs on these cables.

In case of power packs with sense input, it is now possible to readjust the output voltage U_{out} automatically.

Basics of Sine-Wave Encoders

GENERAL INFORMATION

SINE-WAVE OPTOASIC TECHNOLOGY BURSTS THE LIMITS

With the introduction of the sine-wave encoder family, Hengstler has taken the opportunity to significantly rework its OptoAsic technology.

The best features have been maintained and new improvements have been introduced. One major feature that has been retained of course, is the high level of EMC reliability which we have achieved by integrating almost the complete encoder electronics into one component.

What is new is the integrated offset and amplitude control together with the in-chip optical system adjustment. In the past anybody wanting high quality, accurate sine-wave signals at low frequencies had to trade in this for bandwidth. We are now able to meet this apparently contradictory requirement with our in-built amplitude control. You can't fail to be convinced by a unit which delivers sine-wave signal with harmonic distortion better than 1% at low speed and 500 kHz max. frequency.

The advantages are crystal clear: If you need precision at slow speeds you no longer have to compromise your productivity because the encoder limits the maximum speed of your machine e.g. for tool changing processes. You can have both - accuracy and speed.

APPLICATIONS

Typical applications:

- Machine tools
- Printing machines
- Gearless elevators
- Drives

Basics of Sine-Wave Encoders

Signals

THE RIS58 SIGNALS

The incremental signals A and B and the zero signal R are differential voltage signals. The differential signal level is 1 Vpp. The zero signal appears once per revolution with a peak of 0.4 V and reaches its maximum value at the angle where the amplitudes of the A and B signals are equal. All signals have a DC-offset of 2.5 V.

THE RIS58 SIGNAL QUALITY

The quality of the servo loop is determined to a large extent by the absence of harmonics in the encoder's sinewave signals, particularly at low speed. In order to achieve high interpolation factors in the sequencing control, the incremental sine signals A and B are available with a harmonic distortion significantly under 1% throughout the specified temperature range. This delivers excellent synchronism and a high level of positional accuracy with servo axes.

Basics of Absolute Encoders ACURO

ABSOLUTE ENCODERS FOLLOW THE LATEST TREND: CHANGE EASILY TO ACURO

Absolute encoders save costs and provide enhanced safety - facts that are obviously important in complex installations and multi-axis machinery: Time-consuming reference runs after powering-up the supply voltage have become a thing of the past for absolute encoders. Hazardous conditions caused by reference runs (which are always necessary with incremental encoders) can be prevented right from the start. Absolute encoders - too large, too expensive?

A prejudice that is cleared up by ACURO. Even the multi turn version of ACURO is no larger than most incremental encoders and costs less than you would expect. And how about reliability? Due to their complexity, absolute encoders seem to be susceptible to faults. No problem with ACURO: once installed they will not cause trouble, due to the highest integration density and use of extremely reliable technologies to ensure safe and reliable long-term operation.

The platform concept

Hengstler's new ACURO absolute encoders feature innovative technology, simple operational and optimal functional safety. Their platform concept also allows especially compact dimensions with a modular design, which always ensures the right version for each individual application in the field of motor feedback and automation engineering. Equipped with the new open BiSS interface these encoders are a good and future oriented investment.

The mechanical construction of ACURO is rugged and precise. Double high-precision ball bearings guarantee reliable long-term operation even at speeds of up to 12000 rpm. ACURO is equipped with the commercially available mechanical interfaces, including solid shaft or hub shaft, synchro-flange or clamping flange.

ABSOLUTE ENCODERS ARE DIFFERENTIATED ACCORDING TO:

Singleturn version

1 revolution (= 360 °) is coded in n steps. After a rotation of over 360 ° the code is repeated.

Multiturn version

Apart from measuring 360 ° (1 revolution) further coded revolutions can be recorded e.g. for applications in combination with lead screws or timing belts. Hengstler is using the principle of a mechanical memory (gearbox, which is unmatched in reliability and EMC).

Basics of Absolute Encoders ACURO

High-Tech Features in a Modular System

INNOVATIVE TECHNOLOGY

Hengstler's ACURO series comprises a complete range of absolute encoders, all in OPTOASIC technology. OPTOASIC units combine all required optical and electronic components in only one silicon chip.

This new technology is tailored to the user's needs and offers advantages previously unknown in the field:

- **High degree of reliability**
due to differential scanning and single-step Gray code.
- **Fail-safe** due to the elimination of more than a hundred components
- **Long serviceable lifetime** due to state-of-the-art semiconductor technology-

- High degree of **electromagnetic compatibility** due to elimination of macroscopic low-current paths.

Our new absolute shaft encoders have an excellent price/performance ratio. As a further feature the encoders are fully backward compatible due to identical mounting flanges and electrical interfaces.

This makes it easy for the user to switch from incremental to absolute shaft encoders.

PROGRAMMABLE ABSOLUTE SHAFT ENCODERS

All essential parameters are userprogrammable.

Additional advantages are uncomplicated subsequent data processing, electronic adjustment and add-on optimization of mechanical systems which are subject to tolerances.

Furthermore, storage and maintenance are more cost-efficient: the same encoder may be used for a variety of applications and assigned to its task at the place of installation.

APPLICATIONS

The new encoders are, for example, perfectly suited to determine angular positions in automated systems with reliable and precise operation.

Absolute encoding eliminates the need for a reference run after interruptions (such as power failures).

ACURO is the right match for a wide range of applications - from medical technology, elevators, all printing, paper processing or metal-processing machinery, such as presses and saws, right through to highly-dynamic drives.

INTERFACES

Of course, the user has a selection of the most advanced interface technology available:

- **Tristate parallel drivers**
The symmetrical push-pull drivers are fully short circuit proof, overload protected and polarity protected in a range from 10 to 30 V.
Parallel bus systems are easy to realize. So you save in cabling expenses.
- **CAN**
Bus specifications according to CAN High-Speed ISO/DIS 11898 for transfer rates up to 1 MBaud.
- **Suconet K1**
Klöckner-Moeller 2 wire fieldbus
- **DeviceNet**
 - Based on CAN layer 2 (data link layer)
 - Up to 64 nodes and 500 KBAud speed
 - Configuration via network

- **INTERBUS**
Interface including the potential-free power supply is already integrated in the housing with a diameter of only 58 mm.
- **SSI**
The encoders can also be supplied with synchronous-serial interface (SSI) which is available worldwide.
This allows trouble-free connection to commercial processing components.
- **Profibus DP**
Protocol according to encoder profile class C2 (programmable)
- **BiSS**
 - bidirectional and fully digital
 - synchronous serial data
 - licence-free
 - up to 8 slaves per master

Basics of Absolute Encoders ACURO

Open Digitale Sensor Interface (BiSS)

GENERAL INFORMATION

The bidirectional digital sensor interface BiSS safeguards communication between position encoders or measuring devices and industrial controls, such as a drive control, for example, and if necessary can transmit measurement values from up to 8 sensors simultaneously.

For 1 to 8 subscribers the interface master provides a clock signal for the simultaneous capture of all position data and for the synchronous-serial data transmission which

follows on from this. Just four unidirectional RS422 data lines are required; the slave electronics, kept to an absolute minimum, are incorporated on the sensor ICs.

When the master sends a clock pulse on line MA, the slave answers directly on return line SL with the recorded position data. Commands and parameters can be swapped on a PWM pulse form; this is, however, not necessary to start the BiSS protocol.

TRANSFER SEQUENCE

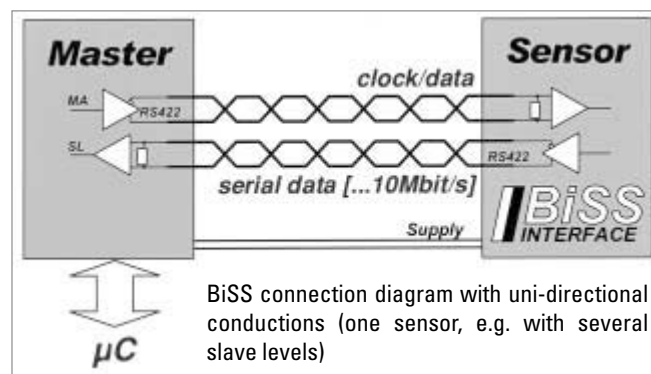

With each data cycle the master learns and compensates for line delays, thus permitting clock rates of up to 10 Mbit/s even for cable lengths of up to 100 m. Changes in line conditions which occur during cable drag, for example, are corrected. The precision of synchronization among several position encoders along various axes is less than 1 microsecond; the master also makes the signal delay it has recorded accessible to the control unit, allowing further optimization.

The BiSS protocol classifies each subscriber in one of the following data sections: sensor data, multi cycle data or register data. These data sections have various setups with regard to access and transmission performance so that a number of different sensor applications are catered for. Bidirectional parameter communication for device configuration - also applicable to what are known as OEM parameters - is

usually consigned to the register data section. Data which alters gradually, such as revolution counts or drive temperatures, is allocated to the multi cycle data section, with rapidly changing angle data being assigned to the sensor data section.

Control cycle times of less than 10 μ s are thus not a problem, even for data words of up to 64 bits in length. There is enough room in the protocol for redundancy; this space is normally used to implement a CRC (cyclic redundancy check). Framed by just one start and one stop bit, the sensor data is transmitted at the best-possible core data rate; a single multi cycle data bit is optional. Also captured when triggered, the multi cycle data bits make up a second in-band protocol which helps to increase the efficiency of the sensor data; permanent monitoring of the position and operation of the drive is possible without interfering with the control cycle.

Circuit diagram of an absolute encoder

Configuration

Specific product developments of individual users are not restricted or made unnecessarily expensive by a compulsory compatibility.

A BiSS subscriber is described with just a few parameters and the XML-descriptive file included with the delivery simplifies start up of the control system.

For further information see:
www.biss-interface.com

Basics of Absolute Encoders ACURO

Synchronous-Serial Interface (SSI)

GENERAL INFORMATION

In many cases, absolute shaft encoders are subject to severe mechanical stresses and to electrical and magnetic fields that contaminate the site.

Therefore, special design measures are needed to combat dirt, dust and liquids in industrial environments.

Our absolute shaft encoders are of state-of-the-art rugged mechanical construction, and the electronic components are very compact.

A main consideration for immunity to interference is the data transfer from the shaft encoder to the control system. The control system must be able to read the readings from the shaft encoder without errors. Under no circumstances should undefined data be transmitted, for example at the changeover point.

The major differences between the concept of synchronous-serial data transfer for absolute shaft encoders described here and parallel and asynchronous serial forms of data transfer are:

- less electronic components
- less cabling for data transfer
- the same interface hardware, regardless of the absolute shaft encoder's resolution (word length)
- electrical insulation of the shaft encoder from the control system by optocouplers
- open-circuit monitoring by constant current
- data transfer rates up to 1.5 megabits per second (depending on the length of line)
- ring-register operating possible.

TRANSFER SEQUENCE

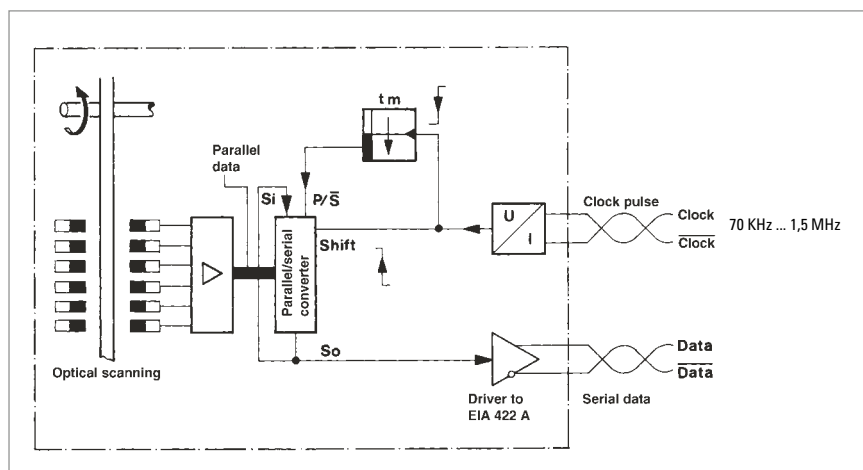

For correct transfer of the data a defined number of pulses (clock pulse brush) must be applied to the clock input of the absolute shaft encoder. Next, a pause T_p must be observed. As long as no clock signal is applied to the shaft encoder, its internal parallel/serial shift register remains switched to parallel. The data change continuously, corresponding to the current position of the shaft encoder's shaft.

As soon as a clock pulse brush is applied to the clock input again, the instantaneous angular data is recorded.

The first shift of the clock signal from high to low ① actuates the shaft encoder's internal retriggerable mono-stable element, whose storage time t_m must be greater than the clock signal's period T .

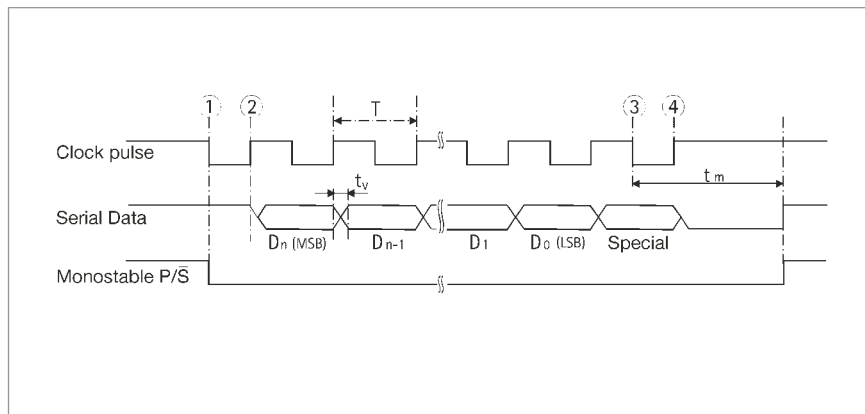

The output of the monostable element controls the parallel/serial register via terminal P/S (parallel/serial).

Block diagram of an absolute shaft encoder

Basics of Absolute Encoders ACURO

Synchronous-Serial Interface (SSI)

T = clock pulse period

t_m = storage time of monostable element

t_m ranging from 10 μ s to 30 μ s

t_v = 100 ns

The number of clock pulses necessary for data transfer is independent of the resolution of the absolute shaft encoder.

The clock signal can be interrupted at any point, or continued in ring-register mode for repeated polling.

With the first shift of the clock signal from low to high ② the most significant bit (MSB) of the angular data is applied to the shaft encoder's serial output.

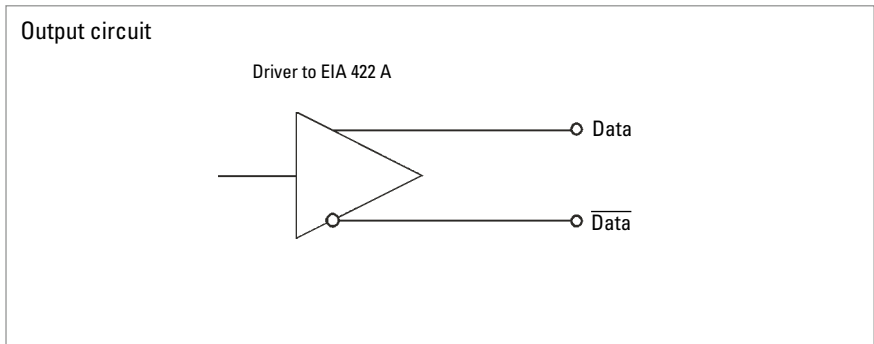

With each succeeding rising edge, the next less significant bit is shifted to the data output.

After transmission of the least significant bit (LSB) the Alarm bit or other special bits are transferred, depending on configuration. Then the data line switches to low ③ until the time t_m has passed.

A further transfer of data cannot be started until the data line switches to high ④ again. If the clock pulse sequence is not interrupted at point ③, the ring-register mode is activated automatically. This means that the data stored at the first clock pulse transition ① are returned to the serial input S_i via the terminal S_0 . As long as the clock pulse is not interrupted at ③, the data can be read out as often as wanted (multiple transfer).

Basics of Absolute Encoders ACURO

Synchronous-Serial Interface (SSI)

RECOMMENDED DATA TRANSMISSION RATE

The maximum data transmission rate depends on the length of cable:

Cable length	Baud rate
< 50 m	< 400 kHz
< 100 m	< 300 kHz
< 200 m	< 200 kHz
< 400 m	< 100 kHz

Basics of Absolute Encoders ACURO

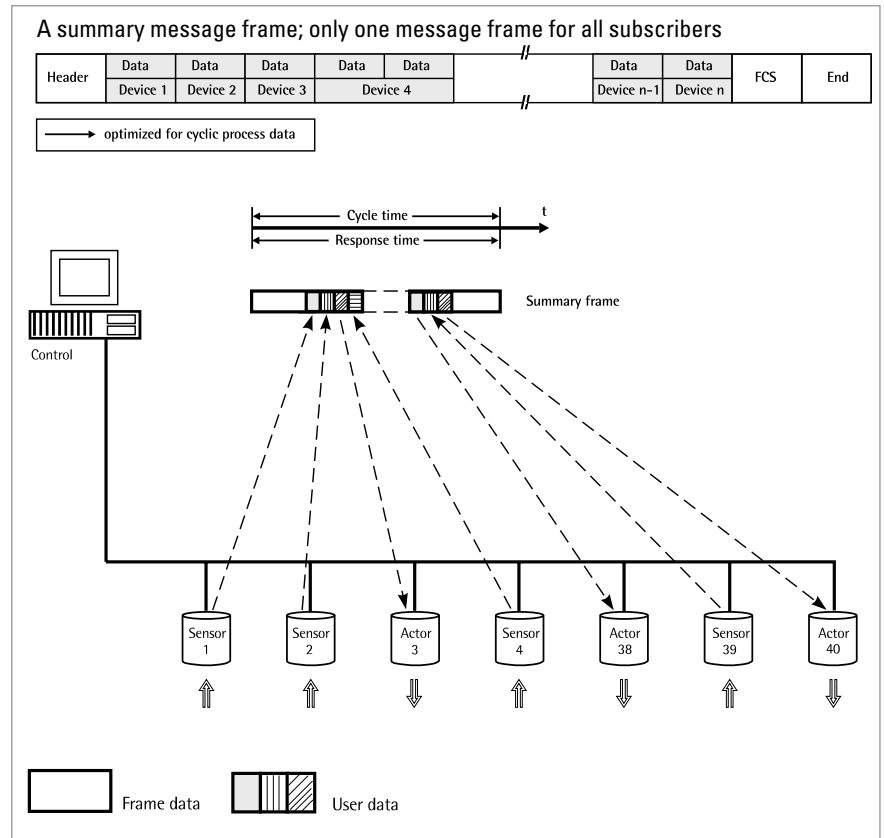

INTERBUS

GENERAL INFORMATION

INTERBUS is a real-time bus for the sensor-actor-level which is able to transfer data with a small overhead in a range of up to 4 bytes per subscriber for a maximum of 256 subscribers.

It is characterized by a circular transmission with a fixed message frame and a central master (e.g. SPC switching-in assembly).

TRANSFER SEQUENCE

WHAT ARE THE BENEFITS OF INTERBUS COMPARED WITH A CONVENTIONAL SYSTEM WIRING?

- Lower costs for cables and wiring
- Lower noise sensitivity
- Many control signals which were analog before are now available as digital signals and directly transferable by INTERBUS
- Simple layout, installation and starting procedure
- High efficiency (net data rate): the percental share of the message header and of the terminating sequence decreases with a growing number of subscribers
- Data of all subscribers are stored at the same time and transferred sub-sequently
- Reaction time can easily be determined. It only depends on the system's total extension; this is important for controlling tasks
- Constant sampling rate for reference inputs and actual values; both are transferred in one bus cycle
- Considerations of priority are unnecessary since all subscribers have the same priority

Basics of Absolute Encoders ACURO

INTERBUS

- No system-parameter definition before starting procedure
- Data integrity is secured by 16-bit-CRC (according to CCITT polynomial) done for each transmission
- Sophisticated diagnostic software for the central bus controller: a point of error can specifically be isolated; in each case of malfunction there is a possibility to close the circular system in every single bus clip.

Encoder manufacturers are joined together in the ENCOM user group; drive manufacturers in DRIVECOM.

The user groups shall maximize the benefit for the customer by standardization of data transmission.

There is a high availability of devices with INTERBUS interface, and the bus mode has already been successful in industrial use.

Devices with an INTERBUS interface for process control are now available from more than 200 manufacturers.

ENCOM USER GROUP

The following device classes defined by ENCOM are used for absolute shaft encoders:

Class 2 (K2):

- 32-bit process data
- Binary
- Right-justified
- Readable only
- No control bits or status bits

Class 3 (K3):

- 32-bit process data
- Coded according to manufacturer specifications
- Right-justified
- 7 status bits and control bits

Basics of Absolute Encoders ACURO

INTERBUS

TECHNICAL DATA

INTERBUS is physically divided into:

Remote bus

- Voltage difference transmission RS 485
- Max. cable length between two bus clips: 400 m
- Max. overall cable length of remote bus: 13 km
- A maximum of 64 bus clips/modules may be directly connected to the remote bus

Peripheral bus

- 5 V voltage interface
- Max. overall cable length of peripheral bus: 10 m
- A maximum of 8 modules may be connected

Installation remote bus

- For modules with enclosure class IP 65 (e.g. HENGSTLER absolute shaft encoders)
- Voltage difference transmission RS 485
- Max. overall cable length: 50 m
- Connection via bus clip or passive T-manifold
- Each subscriber has an electrically isolated voltage transformer
- 24 V supply may be led via the bus line or be connected to the T-manifold
- 8 modules may be connected.

The transmission speed is **500 kBit/s**.

Basics of Absolute Encoders ACURO

INTERBUS

INTERBUS DIAGNOSTIC CONCEPT

The diagnostic system is able to indicate peripheral and controller errors beside the selection of faults. Due to a row of LEDs comprising 16 bits, available on most switching-in assemblies, decentralized process states can be displayed centrally.

- Status display on control system for inputs and outputs without hand programming unit

- Self-acting fault detection and display with point and type of error without user programming
- Usual diagnosis by hand programming unit can be kept
- Diagnostic representation is always the same regardless of the control system.

For further information see:
www.interbusclub.com/de

CANopen

GENERAL INFORMATION

The AC 58 is an absolute shaft encoder (encoder, angle encoder). The version described in this technical manual sends its current position to another station via the "CAN-bus" transmission medium (physically: screened and twisted two-wire line).

The serial bus system CAN (Controller Area Network), which had been originally developed by Bosch/ Intel for automotive uses, is gaining ground in industrial automation technology. The system is multimaster-compatible, i.e. several CAN- stations are able to request the bus at the same time. The message with the highest priority (determined by the identifier) will be received immediately.

The data transfer is regulated by the message's priority. Within the CAN system, there are no transport addresses, but message identifiers. The message which is being sent can be received by all stations at the same time (broadcast).

By means of a special filter methods, the station only accepts the relevant messages. The identifier transmitted with the message is the basis for the decision as to whether the message will be accepted or not.

The bus coupler is standardised according to the international standard ISO-DIS 11898 (CAN High Speed) standard and allows data to be transferred at a maximum rate of 1 MBit/ s. The most significant feature of the CAN-protocol is its high level of transmission reliability (Hamming distance = 6).

The CAN-Controller Intel 82527 used in the encoder is **basic** as well as **full-CAN** compatible and supports the **CAN-specification 2.0 part B (standard protocol with 11-bit- identifier as well as extended protocol with 29-bit identifier)**. Up to now, only 11-bit identifiers have been used for CANopen.

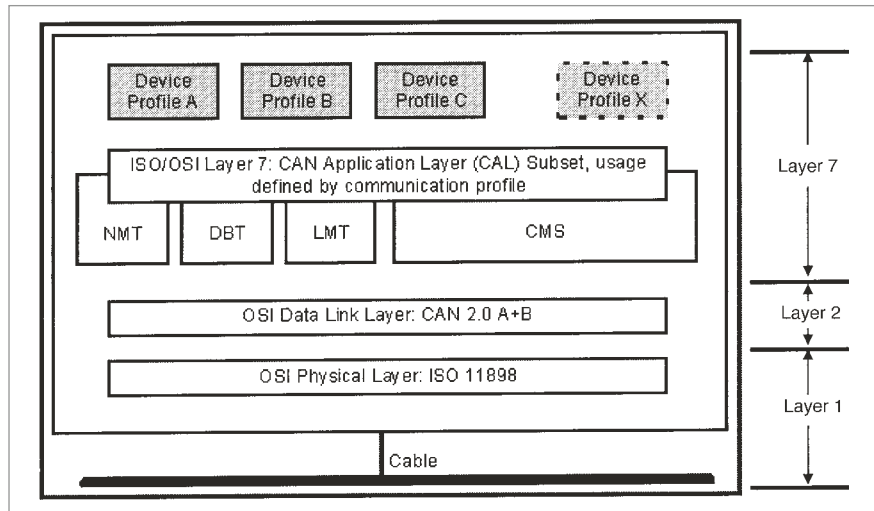

FIELD OF APPLICATION

In systems, where the position of a drive or of any other part of a machine has to be recorded and signalled to the control system, the AC 58 can assume this function. The AC 58 can resolve, for instance, positioning tasks by sending the check-back signal concerning the present drive position via the CAN bus to the positioning unit.

CANopen

CANOPEN COMMUNICATION MODEL AND PROFILE

Layer 1 (Physical Layer): ISO-DIS 11898 (CAN High Speed)

Layer 2 (Data Link Layer): ISO-DIS 11898 (CAN High Speed)

Layer 7 (Application Layer): CiA DS 301 (CANopen CAL-based Communication Profile)
+ Device profile CiA DS 4xx (CANopen Device Profile for xx)

For the following devices, profiles already exist::

- CiA Draft Standard Proposal 401 for Input/Output Modules
- CiA Draft Standard Proposal 402 for Drives and Motion Control
- CiA Work Item 403 for Human-Machine Interfaces
- CiA Work Draft 404 for Closed-Loop Controllers and Transformers
- CiA Work Item 405 for IEC-1131 Interfaces
- **CiA Draft Standard Proposal 406 for Encoders**
- CiA Work Item 407 for Public Transport
- CiA Work Item 408 for Fork-Lifts

CANopen

THE CANOPEN PROFILE

About two and a half years after the CiA, the association of the user and manufacturer of CAN products, had adopted the CAN Application Layer (CAL), CANopen and the respective device profiles paved the way for the development of open systems.

CANopen has been developed under the technical direction of the Steinbeis Transfer Centre for Automation (STA Reutlingen; Germany) on the basis of the layer 7 CAL specification.

Compared with CAL, CANopen only provides the functions needed for this special purpose. CANopen is thus a part of CAL which has been optimised for application purposes and allows for a simpler system structure as well as for simpler devices.

CANopen has been optimised for a quick transfer of data in real-time systems and has been standardised for different device profiles.

The CAN in Automation (CiA) association of users and manufacturers is responsible for the establishing and the standardisation of the respective profiles.

The RA58 with CANopen meets the requirements laid down in the communication profile (CiA DS 301) and in the device profile for encoders.

CANopen allows for:

- auto configuration of the network,
- comfortable access to all device parameters.
- synchronisation of the devices,
- cyclical and event-controlled process data processing,
- simultaneous data input and output.

CANopen uses four communication objects (COB) with different features:

- Process Data Objects (PDO) for real-time data
- Service Data Objects (SDO) for the transfer of parameters and programs
- Network Management (NMT, Life-Guarding)
- predefined objects (for synchronisation, time stamp, emergency message)

All device parameters are stored in an object directory. The object directory contains the description, data type and structure of the parameters as well as their addresses (index).

The directory consists of three parts: communication profile parameters, device profile parameters and manufacturer specific parameters.

THE ENCODER DEVICE PROFILE (CIA DSP 406)

This profile describes a binding, but manufacturer-independent definition of the interface for encoders. The profile not only defines which CANopen functions are to be used, but also how they are to be used. This standard permits an open and manufacturer-independent bus system.

The device profile consists of two object categories

- the standard category C1 describes all the basic functions the shaft encoder must contain

- the extended category C2 contains a variety of additional functions which either have to be supported by category C2 shaft encoders (mandatory) or which are optional. Category C2 devices thus contain all C1 and C2 mandatory functions as well as, depending on the manufacturer, further optional functions.

Furthermore, an addressable area is defined in the profile, to which, depending on the manufacturer, different functions can be assigned.

Basics of Absolute Encoders ACURO

CANopen

DATA TRANSFER

In CANopen, the data is transferred by means of two different communication types (COB = Communication Object) with different features:

- **Process Data Objects (PDO)**
- **Service Data Objects (SDO)**

The priority of the message objects is determined by the COB identifier.

The **process data objects (PDO)** serve the highly dynamic exchange of real-time data (e.g. position of the shaft encoder) with a maximum length of 8 Byte. This data is transferred with high priority (low COB identifier). PDOs are broadcast messages and put their information simultaneously at the disposal of all desired receivers.

The **service data objects (SDO)** form the communication channel for the transfer of device parameters (e.g. programming of the shaft encoders' resolution). Since these parameters are transferred acyclically (e.g. only once when running up the network), the SDO objects have a low priority (high COB identifier).

COB IDENTIFIER

For an easier administration of the identifiers, CANopen uses the "Predefined master/Slave Connection Set"). In this case, all identifiers with standard values are defined in the object directory. However, these identifiers can be modified according to the customers' needs via SDO access.

The 11-bit identifier consists of a 4 bit function code and a 7 bit node number.

Bit-No.	10	9	8	7	6	5	4	3	2	1	0
Type	Function code				Node number						
Assignment ¹	x	x	x	x	0	0	x	x	x	x	x

¹ x = binary value can be selected freely 0 or 1); 0 = 0 value is fixed

The higher the value of the COB identifier, the lower the identifier's priority!

NODE NUMBER

The 7-bit node number is set by means of the hardware via the 5 DIP switches on the encoder's back.

For further information see CAN user organisation:

Basics of Absolute Encoders ACURO

DeviceNet

BACKGROUND AND TECHNOLOGY

Background

- The basic technology was developed by Allen-Bradley
- Introduced in March 1994
- The ODVA (Open DeviceNet Vendor Association) was founded in April 1995

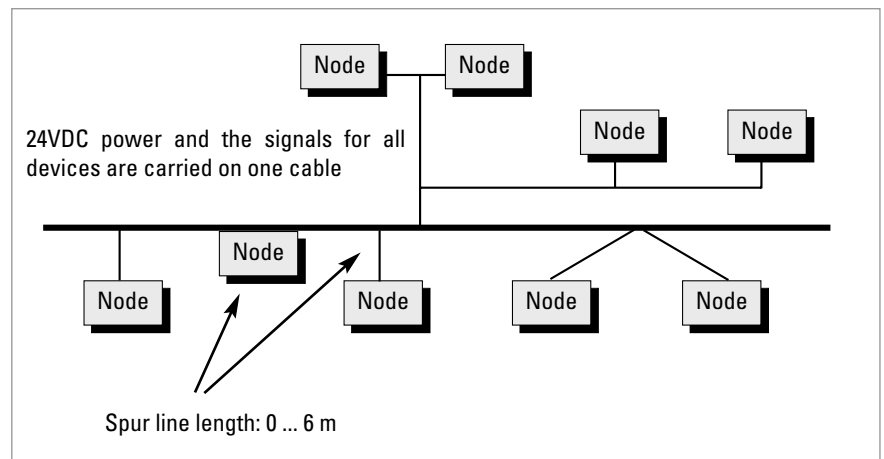

Technology

- CAN-Layer 2 (Data Link Layer) - ISO 11898 and 11519-1
- DeviceNet covers layer 7 (Application Layer) and layer 1 (Physical Layer), developed for industrial automation

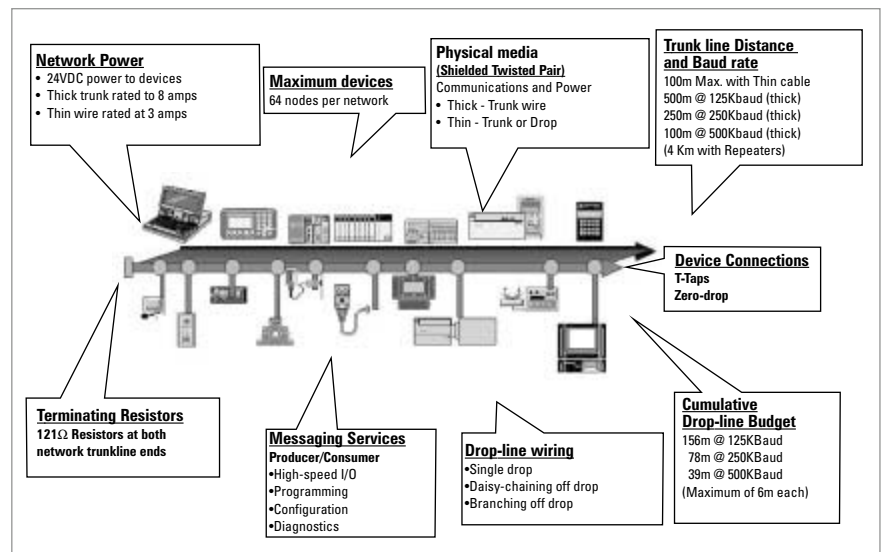

Main benefits

- Reduced cabling and installation effort
- Reduced run-in time
- Reduced down-time
- Fast error elimination
- Devices can be removed, replaced and inserted without having to shut the network down
- Devices from various manufacturers can be exchanged
- Devices are configured over the network

Basics of Absolute Encoders ACURO

Profibus-DP

GENERAL INFORMATION

The basic functions of the PROFIBUS DP are here only described in extracts. For additional information, please refer to the standards on PROFIBUS DP, i.e. DIN 19245-3 and EN 50170 respectively.

INTRODUCTION

The AC 58 is an absolute shaft encoder (encoder, angle encoder). The version described in this manual sends its current position to another station via the transmission medium "PROFIBUS DP" (physically: screened and twisted pair line). The AC 58 supports all class 1 and 2 functions listed in the encoder profile.

PROFIBUS-DP is manufacturer independent, open field bus standard for a variety of applications in the field of production, process and building services automation. The requirements of openness and independence from the manufacturer are stipulated in the European standard EN 50 170.

PROFIBUS-DP permits the communication of devices produced by different manufacturers without any particular adaptations of the interfaces.

PROFIBUS DP is a special standard version for a quick data exchange within the field level which has been optimised in terms of speed and low connection costs. Central control systems like, for example SPC/ PC communicate via a quick, serial connection with local field devices like drives, valves, or encoders. The data exchange between these devices is predominantly cyclical. The communication functions required for this exchange are determined by the basic functions of the PROFIBUS DP according to the EN 50 170 European standard.

FIELD OF APPLICATION

In systems, where the position of a drive or of any other part of a machine has to be recorded and signalled to the control system, the AC 58 can assume this function.

The AC 58 can resolve, for instance, positioning tasks by sending the checkback signal concerning the present drive position via the PROFIBUS DP to the positioning unit.

BASIC FUNCTIONS OF THE PROFIBUS-DP

The central control system (master) cyclically reads out the input information from the slaves and writes the output information to the slaves. For this purpose, the bus cycle time has to be shorter than the program cycle time of the central SPC, which amounts to approx. 10 ms for various applications.

Apart from the cyclical user data transfer, the PROFIBUS DP version also disposes of powerful functions for diagnosis and initial operation procedures. The data traffic is controlled by watchdog functions on both the slave and the master side. The following table summarises the basic functions of the PROFIBUS DP.

Basics of Absolute Encoders ACURO

Profibus-DP

Transmission technology:	<ul style="list-style-type: none"> • RS-485 twisted pair line • Baud rates ranging from 9.6 kbit/s up to 12 Mbit/s
Bus access:	<ul style="list-style-type: none"> • Token passing procedure between the masters and master-slave procedures for slaves • Monomaster or multimaster systems possible • master and slave devices, max. of 126 stations at a single bus
Communication:	<ul style="list-style-type: none"> • Point-to-point (user data communication) or multicast (control commands) • cyclical master-slave user data communication and acyclical master-master data transfer
Operating state:	<ul style="list-style-type: none"> • Operate: cyclical transfer of input and output data • Clear: The input data are read, the output data remain in the safe status • Stop: only master-master data transfer is possible
Synchronisation:	<ul style="list-style-type: none"> • Control commands enable a synchronisation of the input and output data • Sync mode: Output data are being synchronised
Functionality:	<ul style="list-style-type: none"> • Cyclical user data transfer between DP master and DP slave(s) • Single DP slaves are dynamically activated or deactivated • Control of the DP slave's configuration. Powerful diagnostic functions, 3 stepped diagnostic message levels. • Synchronisation of in- and/ or output • Address assignment for the DP slaves via the bus • Configuration of the DP masters (DPM1) via the bus • Maximum of 246 byte input and output data per DP slave possible
Protection functions:	<ul style="list-style-type: none"> • All messages are transferred with a hamming distance of HD=4 • Response control at the DP slaves • Access protection of the DP slaves' input/ output • Monitoring of the user data communication with adjustable control timer at the master
Device types:	<ul style="list-style-type: none"> • DP master class 2 (DPM2), e.g. programming/ project planning devices • DP master class 1 (DPM1), e.g. central automation devices like SPC, PC • DP slave e. g. devices with binary or analogue input/ output, drives, valves

ESSENTIAL FEATURES/ SPEED

The PROFIBUS DP only requires approx. 1 ms at a speed of 12 Mbit/s in order to transfer 512 bit input and 512 bit output data by means of 32 stations.

The following diagram shows the usual PROFIBUS DP transfer time interval in relation to the number of stations as well as the transmission speed. The high speed can be above all explained by the fact that the input and output data within a message cycle are transferred by using the layer 2 SRD service (Send and Receive Data Service).

Diagnostic function:

The comprehensive diagnostic functions of PROFIBUS DP allow a quick localisation of the errors. The diagnostic messages are transferred by means of the bus and are assembled at the master. They are subdivided in three levels:

Basics of Absolute Encoders ACURO

Profibus-DP

BASIC FEATURES/SPEED

Station-related diagnosis

Messages on the general readiness for service of a station, like for example, overtemperature or undervoltage.

Module-related diagnosis

These messages indicate that a diagnosis within a certain I/O part (e.g. 8 bit output module) of a station is in hand.

Channel related diagnosis

The error cause in relation to a single input/output bit (channel) is indicated here, like for example, a short-circuit at output line 7.

Bus cycle time of a PROFIBUS DP monomaster system

Boundary conditions: Each slave has 2 byte input and 2 byte output data; the minimum slave interval time amounts to 200 microseconds; TSDI = 37 bit times, TSDR = 11 bit times

CONFIGURATION OF THE SYSTEM AND DEVICE TYPES

By means of PROFIBUS DP, mono- and multimaster systems can be realised. For this reason, a high level of flexibility in terms of the system configuration can be achieved. A maximum of 126 devices (master or slaves) may be connected to a bus. The definitions for the system configuration contain the number of stations, the assignment of the station address to the I/O addresses, the data consistency of the I/O data, the format of the diagnostic messages and the bus parameters used. Each PROFIBUS DP system consists of different device types. There are three device types to be distinguished:

DP master class 1 (DPM1)

These devices are central control systems exchanging information with the local stations (DP slaves) during a fixed message cycle. Typical devices of this kind are stored-program controllers (SPC), PC or VME systems.

DP master class 2 (DPM2)

Programming, configuration devices, and operator panels belong to this category. They are used for the initial operation procedures in order to establish the configuration of the DP system, or to operate the plants in the course of operation.

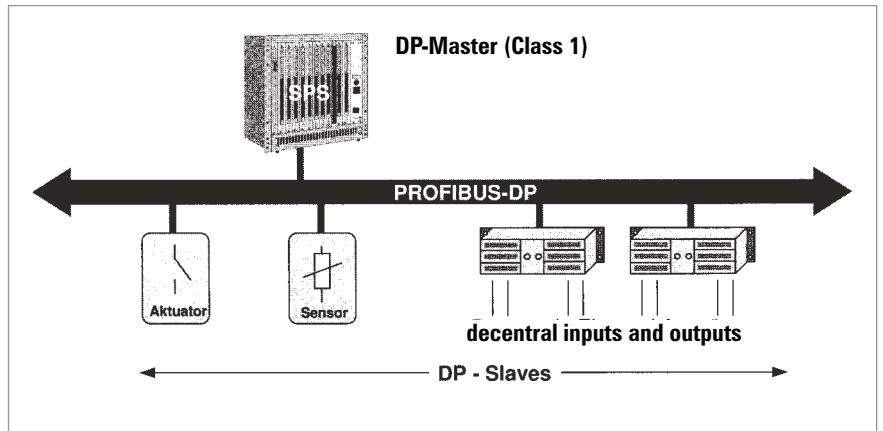

DP slave

A DP slave is a peripheral I/O rack (I/O, drives, HMI, valves) that reads the input information and sends output information to the peripheral equipment. Devices which provide only input or only output information might also be used.

The amount of input and output information is device specific and must not exceed 246 byte for the input and 246 byte for the output data.

Basics of Absolute Encoders ACURO

Profibus-DP

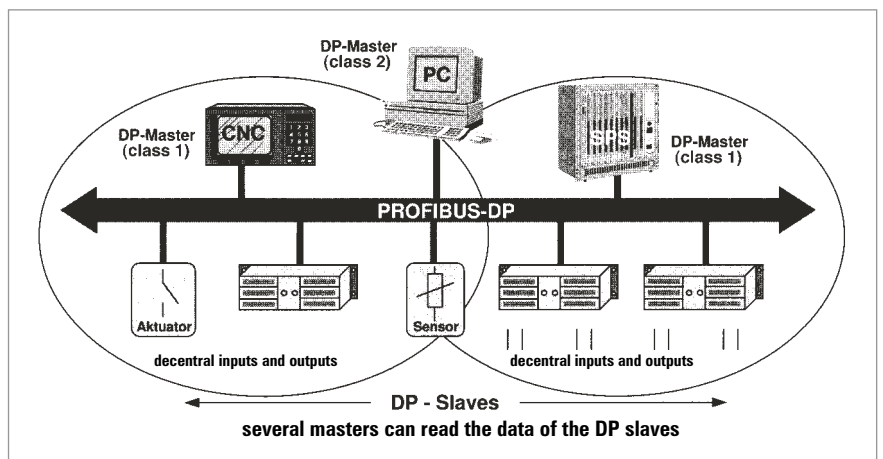

PROFIBUS DP monomaster system

In the case of monomaster bus systems, there is only one master active at bus during the on-line phase of the bus system. The above diagram shows the system configuration of a monomaster system.

The SPC based control system is the central control element. By means of the transmission medium, the DP slaves are locally linked to the SPC control system. By using this system configuration, the shortest bus cycle time can be obtained.

In the multimaster mode, several masters are linked to a single bus. They either form independent subsystems consisting of one DPM1 and its corresponding DP slaves each, or additional configuration and diagnostic devices (see diagram below). The I/O maps of the DP slaves can be read by all DP masters, but only one DP master, the one which has been assigned DPM1 during project planning, is able to write the output information. Multimaster systems attain a medium bus cycle time.

PROFIBUS-DP Multi-Master System

Profibus-DP

SYSTEM PERFORMANCE

In order to obtain a high level of exchangeability between the devices, the system performance of PROFIBUS DP has also been standardised. It is mainly determined by the operational status of the DPM1.

The DPM1 can either be controlled locally or via the bus by the project planning device. The following three main states can be distinguished:

Stop

There is no data traffic between DPM1 and the DP slaves.

Clear

The DPM1 reads the input information of the DP slaves and maintains the safe status of the DP slaves' output.

Operate

The DPM1 has entered the data transfer phase. In case of a cyclical data traffic, the input is read by the DP slaves while the output is transferred to the DP slaves.

After an error has occurred during the data transfer phase of the DPM1, like for example, the failure of a DP slave, the response of the system is determined by the operating parameter "Auto Clear".

If this parameter has been set to true, the DPM1 will set the output of all the respective DP slaves to the safe status, as soon as a DP slave is no longer available for user data communication. Afterwards, the DPM1 changes to the clear status.

If this parameter is = false, the DPM1 remains, even if an error occurs, in the operate status, and the user can determine the response of the system at his own discretion.

CYCLICAL DATA TRANSFER BETWEEN DPM1 AND THE DP SLAVES

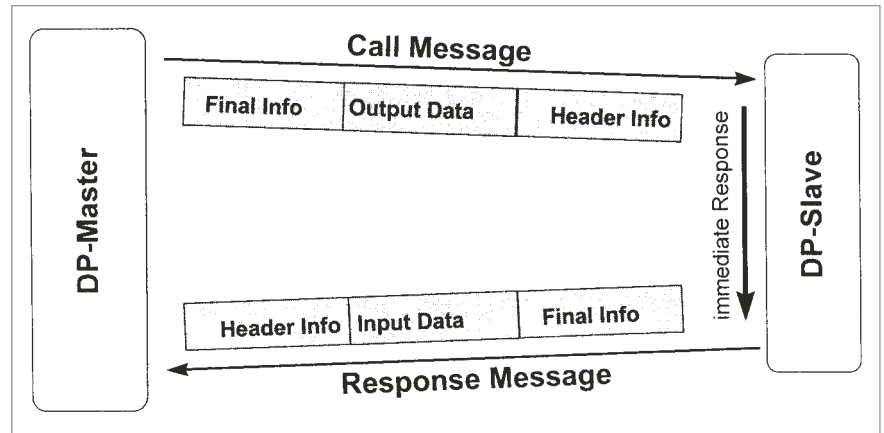

The data traffic between the DPM1 and the respective DP slaves is automatically handled by the DPM1 in a fixed, recurring order. When configuring the bus system, the user assigns a DP slave to the DPM1. In addition, the slaves to be included in- or excluded from the user data communication are defined.

The data traffic between the DPM1 and the DP slaves is subdivided in parametrisation, configuration, and data transfer phases. Before including a DP slave in the data transfer phase, the DPM1 checks during the parametrisation and configuration phase, whether the planned set configuration corresponds to the actual configuration of the device.

For this check, the device type, the information on the format and the length as well as the number of input and output lines have to be correct. The user thus obtains a reliable protection against parametrisation errors. In addition to the user communication, which is automatically executed by the DPM1, the user may request the new parametrisation data to be sent to the DP slaves.

Basics of Absolute Encoders ACURO

Profibus-DP

User data communication for PROFIBUS-DP

DATA TRAFFIC BETWEEN DPM1 AND PROJECT PLANNING DEVICES

In addition to the functions between DP master and DP slaves, master-master communication functions are available, see table. They support the project planning and diagnostic devices in projecting the system via the bus.

Besides the upload and download functions, the master-master functions offer the opportunity to switch the user data transfer between the DPM1 and the single DP slaves dynamically on or off as well as to modify the operating status of the DPM1.

Function	Meaning	DPM1	DPM2
Get_master_Diag	reads the diagnostic data of the DPM1 or the collective diagnosis of the DP slaves.	M	0
Download / Upload Group (Start_Seq, Down-/Upload, End_Seq)	reads or writes the entire configuration data of a DPM1 and of the respective DP slaves.	0	0
Act_Para_Brct	activates the bus parameters for all operating DPM1 devices.	0	0
Act_Param	activates parameters or modifies the operating status of the operating DPM1 device.	0	0

M: mandatory, 0: optional

Functional overview for the master-master functions for PROFIBUS DP

Profibus-DP

SYNC MODE

In addition to the station-related user data communication being automatically handled by the DPM1, the masters may send control commands to a single slave, a group of slaves or all slaves at the same time. These control commands are transferred as multicast. It is only by means of this multicast that the sync and freeze operating modes for the event-controlled synchronisation of the DP slaves have been enabled.

The sync mode is started by the slaves, as soon as they receive a sync command from the respective master. The output lines of the addressed slaves will then be frozen in their current state. The output data will be stored at the slaves during the following user data transfers; the state of the output lines, however, will remain unchanged. Unless the next sync command has been received, the stored output data will not be connected to the output lines. By selecting unsync, the sync mode is terminated.

PROTECTIVE MECHANISMS

For reasons of safety, it is necessary to equip PROFIBUS DP with powerful protective functions against false parametrisation or failure of the transmission equipment. For this purpose, control mechanisms at the DP master and the DP slave have been realised, taking the form of time-out circuits. The monitoring interval is determined during project planning.

At the DP master

The DPM1 controls the data traffic of the slaves by means of the Data_Control_Timer. For each slave, a special timer is used. The time-out circuit will respond, if no proper user data transfer occurs during a control interval. In this case, the user will be informed. If the automatic response to an error (Auto_Clear = True) has been released, the DPM1 will quit the operate status, switch the output lines of the respective slaves to the safe status and change to the clear status.

At the DP slave

In order to recognise errors by the master or transmission errors, the slave executes the response control. If there is no data traffic during the response control interval, the slave will automatically switch the output lines to the safe status.

When operating in multimaster systems, a supplementary access protection for the I/O lines of the slaves will be necessary. This is to make sure that direct access can only be gained by an authorised master. For all the other masters, the slaves will provide an I/O map which can be also be read without access authorisation.

COMMUNICATION INTERFACE

The communication interface corresponds to the PROFIBUS DP class 2 encoder profile.

Within this interface the class 1 functions are included.

For further information see:
www.profibus.de

Glossary of Technical Terms

Absolute shaft encoder	Shaft encoder that transmits unique coded data for each increment.
Accuracy	The difference between the actual and measured position.
Alarm signal	Serves to monitor the shaft encoder for malfunctions, such as glass breakage, fouling, short circuit, short circuit of signal line, and supply voltage too low.
Amplitude regulation	Current or voltage amplitude is constant through regulation
Analogue signal	A signal whose level alters continuously.
ASIC	Application specific integrated circuit
Axial loading	Maximum load on the shaft encoder's shaft in the axial direction
Bandwidth	Frequency range for output signals
Baud rate	Rate of data transfer (bits per second).
BCD	Binary-coded decimal; binary representation of a decimal number.
Binary	Two logical states (yes/no); the basis of binary data-processing systems.
Binary code	Code using binary numbering; often used for absolute measuring systems.
Bit	Abbreviation for "binary digit"; the smallest unit of information of a binary system, whose value can be 1 or 0 (yes-or-no decision).
Bus cycle	Time needed for polling every bus slave by the bus master.
Byte	Sequence of 8 bits.
CAL	Can application layer
CANopen	Layer 7 protocol based on CAN
CCW	Counter clockwise
Change of state	For CAN: Bus node (encoder) sends it's data automatically when a position change occurs.
Channel	Signal track on which 1 or 0 is outputted.
CiA	CAN in automation (CAN users and manufacturers group)
CiA DS	CAN in automation draft standard, communication profile
CiA DSP	CAN in automation draft standard proposal, communication profile
CIM	Computer Integrated Manufacturing; i. e. the linking of different computer-aided processes in production and related fields for general use of the data.
CMD	Software tool for configuration and diagnosis of Interbus networks
COB	Communication object
Code	Format in which data are transmitted.
Code switching frequency	Number of position steps per second. For absolute shaft encoders with parallel interface: The maximum output frequency of the LSB output driver (f_{\max}) also limits the maximum permissible code switching frequency: Code switching frequency max. = $2 \cdot f_{\max}$ for Binary code Code switching frequency max. = $4 \cdot f_{\max}$ for Gray code

Glossary of Technical Terms

Coefficient of thermal expansion	Material expansion under influence of temperature change [$\mu\text{m}/^\circ\text{K m}$], relevant for linear scales.
Complementary	Output circuit for which also the inverted signals are outputted (e.g. Channel A and Channel A). Electrically, the 1/0 levels are transmitted as voltage differences between two lines. In this way the information signal (the difference) remains pure as in general interferences are interspersed equally on both lines.
CRC	Cyclic redundancy check. Bit error protection method for data communication.
CW	Clockwise
Data bus	System of lines over which data are transferred electronically in parallel or serially.
Data consistency	Intrinsic coherence of data in respect of timing and logical aspects.
Data integrity	Correspondence of data with the reality that they describe.
Datavalid	Output for checking the validity of data.
DC	Direct current (not alternating)
Demodulator	Device that filters the original information out of an altered signal again.
DeviceNet - conformity and interoperability	Confirmation of agreement of a bus node with the DeviceNet specifications and correct interoperability with other DeviceNet nodes.
Differential line driver	Output circuit in which the difference between the two signals A and A is evaluated, thus providing high signal transmission reliability.
DIN	Deutsche Industrie Norm (German Industrial Standard)
Direction	Control input for determining the data sequence (whether ascending for clockwise or counterclockwise rotation).
Dual Code	Natural binary code
EDS - File	Electronic data sheet. This is a file with the device specific parameter description and is provided by the manufacturer of a DeviceNet or CANopen device.
EEPROM	"Electrically Erasable Programmable Read-Only Memory" chip (see EPROM).
EIA	Electronic Industries Association; U.S. umbrella organization of manufacturers of electronic equipment and facilities. It is responsible for maintenance and development of the industrial standards for interfaces between data-processing devices and data communications equipment.
EMC	Electromagnetic compatibility
ENCOM	User group of manufacturers of INTERBUS-S absolute shaft encoders
Encoder monitoring	See "Alarm signal"
Enable	Control input via which the data outputs can be activated.
Encoder power	Supply voltage to be provided for the shaft encoder.
EPROM	"Erasable Programmable Read-Only Memory" chip, which can be erased with ultraviolet light, after which new data can be written into it.
Gray code	A special binary code that changes only one data bit per measuring step at a time. It is used with absolute encoders.

Glossary of Technical Terms

Hamming distance	Measure for data security in a data transmission. The higher the number the better the ability to detect data errors.																												
Harmonic Distortion	Measure for the signal quality of sinewave encoder [%]. It describes the content of harmonics in analogue signals. The lower the number the better the signal.																												
Hysteresis error	Measurement deviation for a position approached from opposite directions.

Interpolation	Scanning of a sinewave signal to increase resolution by generating intermediate position values.																												
IP	See "Protection class"																												
Jitter	Change in the phase angle between Channel A and B within one revolution (360°).																												
Latch	Control input for storing ("freezing") the data before they are read out.																												

Glossary of Technical Terms

Linearity	Deviation of the reading from the actual value within one revolution (360°).																
Line driver	Output circuit that makes a larger current possible.																
LSB	Least Significant Bit																
Measuring wheel	A wheel that, mounted on a shaft encoder, converts a linear motion into a rotary motion.																
MSB	Most Significant Bit																
MTBF	“Mean Time Between Failures”, a measure of average service life.																
Multi-turn shaft encoder	Shaft encoder which transmits the number of shaft revolutions as well as the angular position of the shaft.																
NC machinery	Numerically Controlled machinery; their movements are programmed.																
NPN input/output	Transistor input/output circuit implemented with an npn transistor, and thus negative switching.																
Offset	For programmable absolute shaft encoders: the offset value is added to the value of physical position. As a result you get a relative shift of the output value (output value = position value + offset value).																
Parallel interface	Transfer point at which the data are transferred in parallel over several lines.																
Parity	Checkbit for error detection in data transfer																
PDO	Process data object (in CAN networks)																
P.L.C.	Programmable Logic Controller: control system whose program is stored in a program memory and can be changed.																
Phase discriminator	Sense-of-direction detector that functions by evaluating the phase angle between Signal A and Signal B.																
Phase tolerance	Deviation of the pulse-edge from Channel A to B, relative to the phase angle 90°.																
PNP input/output	Transistor input/output circuit implemented with a pnp transistor, and thus positive switching.																
Preset	For programmable absolute shaft encoders: The programmed numerical value is accepted as output value (output value = preset value).

2	solid bodies with dia. > 12 mm, warding off fingers etc.																
3	solid bodies with dia. > 2.5 mm, warding off tools, wires, etc. (thickness > 2.5 mm)																
4	solid bodies with dia. > 1 mm, warding off tools, wires, etc. (thickness > 1 mm)																
5	dust in harmful quantities, complete shock-hazard protection																
6	dust (dust-tight), complete shock-hazard protection																

Glossary of Technical Terms

Protection class (continued)	<p>2nd digit Degree of protection against water</p> <p>0 no special protection</p> <p>1 water dripping vertically</p> <p>2 water dripping at angles up to 15° from vertical</p> <p>3 water dripping at angles up to 60° from vertical (spraying water)</p> <p>4 water from all directions (splashing water)</p> <p>5 water from a nozzle from all directions (hose-water)</p> <p>6 heavy seas or strong jet of water (flooding)</p> <p>7 water, if the device is immersed in water under specified conditions of pressure and time (immersion)</p> <p>8 water, if the device is submerged constantly. The manufacturer must describe the conditions (submersion)</p> <p>(For numbers 1 to 8, water must not penetrate in harmful quantities.)</p> <p>Example: IP 65 A device thus designated is dust-tight, and protected against hose-water.</p>
PVC	Polyvinylchloride; plastic coating of device cable
PTB approval	Approval for use by the Physikalisch-Technische Bundesanstalt, the German government materials testing institute.
Pulse (repetition) frequency, max.	The maximum signal frequency achievable by the shaft encoder, the product of rotary speed and number of markings.
Radial load, max.	Maximum loading of shaft encoder shaft in radial direction.
Quickon	Connector with self contacting cable cutting contacts from Phoenix Contact used with Interbus Loop
RAM	"Random Access Memory" chip; this memory can be read from, written to, and erased freely. When the power goes off, it loses its information.
Reference mark	Irregular gradation pattern that generates a single signal peak, to provide an absolute reference for an incremental shaft encoder.
Reference pulse	Square-wave signal generated by a reference mark, usually only one increment wide, to provide an absolute reference for an incremental shaft encoder.
Repeatability	Degree of deviation for a point approached repeatedly under identical operating conditions.
Resolution	Number of increments per revolution (rotary) or distance between two increments (linear)
Resolver	Inductive angular measuring device that generates two alternating voltages, with amplitude a function of the angle.
Reversal error	Deviation in reading of a position when approached from different directions (hysteresis).
ROM	"Read-Only-Memory" chip, whose memory can only be read out.
RS 422	Standardized interface for unidirectional point-to-point connections (for description refer to "Complementary"); voltage difference 7 V DC max.
RS 422/485	Interfaces for serial data transfer with specifications to EIA standards.
RS 485	Like RS 422, however as a bidirectional bus interface
Sampling frequency	Number of signal periods per second. The maximum sampling frequency limits the speed of incremental measuring systems.
SDO	Service data object (in CAN networks)

Glossary of Technical Terms

Sense	The Sense lines (Sense VCC and Sense GND) enable measurement of the factual encoder voltage without adulteration by voltage drop due to supply current and cable resistivity. With that e.g. supply voltage can automatically be adjusted.
Scaling	For programmable absolute shaft encoders the encoder actual value is multiplied by a scaling factor. Thus the resolution (increments per measuring distance or increments per revolution) is adaptable to the respective application.
SSI	Synchronous-serial Interface; standardized interface for serial data transfer
TPE	Thermo-plastic polyester elastomer; plastic coating of device cable
Tristate	Control input; switches the outputs either to active or to high impedance.
Two's complement	Number format for the representation of negative numbers; range of values at n bit: $-(2^n - 1) \dots 0 \dots (2^{n-1} - 1)$

GENERAL CONDITIONS

FOR THE SUPPLY OF PRODUCTS AND SERVICES OF THE ELECTRICAL AND ELECTRONICS INDUSTRY*

for commercial transactions between businesses

– January 2002 –

I. GENERAL

1. The scope of deliveries and/or services (hereinafter referred to as „Supplies“) shall be determined by the written declarations of both Parties. General terms and conditions of the Purchaser shall apply only if and when expressly accepted by the supplier or the provider of services (hereinafter referred to as „Supplier“) in writing.
2. The Supplier herewith reserves any industrial property rights and/or copyrights pertaining to its cost estimates, drawings and other documents (hereinafter referred to as „Documents“). The Documents shall not be made accessible to third parties without the Supplier's prior consent and shall, upon request, be returned without undue delay to the Supplier if the contract is not awarded to the Supplier. Sentences 1 and 2 shall apply mutatis mutandis to documents of the Purchaser; these may, however, be made accessible to third parties to whom the Supplier may rightfully transfer Supplies.
3. The Purchaser shall have the non-exclusive right to use standard software, provided that it remains unchanged, is used within the agreed performance parameters, and on the agreed equipment. The Purchaser may make one back-up copy without express agreement.
4. Partial Supplies shall be allowed, unless they are unreasonable to accept for the Purchaser.

II. PRICES AND TERMS OF PAYMENT

1. Prices shall be ex works and exclude packaging; value added tax shall be added at the then applicable rate.
2. If the Supplier is also responsible for assembly or erection and unless otherwise agreed, the Purchaser shall pay the agreed remuneration and any incidental costs required, e. g. travel costs, costs for the transport of tools and equipment, and personal luggage as well as allowances.
3. Payments shall be made free Supplier's paying office.
4. The Purchaser may set off only those claims that are undisputed or against which no legal recourse is possible.

III. RETENTION OF TITLE

1. Items pertaining to the Supplies („Retained Goods“) shall remain the property of the Supplier until each and every claim the Supplier has against the Purchaser on account of the business connection has been fulfilled. If the combined value of the security interests of the Supplier exceeds the value of all secured claims by more than 20 %, the Supplier shall release a corresponding part of the security interest if so requested by the Purchaser.
2. For the duration of the retention of title, the Purchaser may not pledge the Retained Goods or use them as security, and resale shall be possible only for resellers in the ordinary course of their business and only on condition that the reseller receives payment from its customer or makes the transfer of property to the customer dependent upon the customer fulfilling its obligation to effect payment.
3. The Purchaser shall inform the Supplier forthwith of any seizure or other act of intervention by third parties.
4. Where the Purchaser fails to fulfil its duties, including failure to make payments due, the Supplier shall be entitled to cancel the contract and take back the Retained Goods in the case of continued failure following expiry of a reasonable time set by the Supplier; the statutory provisions that a time limit is not needed remain unaffected. The Purchaser shall be obliged to surrender the Retained Goods.

IV. TIME FOR SUPPLIES; DELAY

1. Times set for Supplies can only be observed if all Documents to be supplied by the Purchaser, necessary permits and releases, especially concerning plans, are received in time and if agreed terms of payment and other obligations of the Purchaser are fulfilled. Unless these conditions are fulfilled in time, times set shall be extended appropriately; this shall not apply where the Supplier is responsible for the delay.
2. If non-observance of the times set is due to force majeure such as mobilization, war, rebellion or similar events, e. g. strike or lockout, such time shall be extended accordingly.
3. If the Supplier is responsible for the delay (hereinafter referred to as „Delay“) and the Purchaser demonstrably suffered a loss therefrom, the Purchaser

may claim a compensation as liquidated damages of 0.5 % for every completed week of Delay, but in no case more than a total of 5 % of the price of that part of the Supplies which because of the Delay could not be put to the intended use.

4. Purchaser's claims for damages due to delayed Supplies as well as claims for damages in lieu of performance exceeding the limits specified in No. 3 above shall be excluded in all cases of delayed Supplies even upon expiry of a time set to the Supplier to effect the Supplies. This shall not apply in cases of mandatory liability based on intent, gross negligence, or due to injury of life, body or health. Cancellation of the contract by the Purchaser based on statute shall be limited to cases where the Supplier is responsible for the delay. The above provisions do not imply a change in the burden of proof to the detriment of the Purchaser.
5. At the Supplier's request the Purchaser shall declare within a reasonable period of time whether the Purchaser cancels the contract due to the delayed Supplies or insists on the Supplies to be carried out.
6. If dispatch or shipment is delayed at the Purchaser's request by more than one month after notice of the readiness for dispatch was given, the Purchaser may be charged, for every month commenced, storage costs of 0.5 % of the price of the items of the Supplies, but in no case more than a total of 5 %. The parties to the contract may prove that higher or, as the case may be, lower storage costs have been incurred.

V. TRANSFER OF RISK

1. Even where delivery has been agreed freight free, the risk shall pass to the Purchaser as follows:
 - a) if the Supplies do not include assembly or erection, at the time when the Supplies are shipped or picked up by the carrier. Upon request of the Purchaser, the Supplier shall insure the Supplies against the usual risks of transport at the expense of the Purchaser;
 - b) if the Supplies include assembly or erection, at the day of taking over in the own works or, if so agreed, after a fault-free trial run.
2. The risk shall pass to the Purchaser if dispatch, shipping, the start or performance of assembly or erection, the taking over in the own works or the trial run is delayed for reasons for which the Purchaser is responsible or if the Purchaser has otherwise failed to accept the Supplies.

VI. ASSEMBLY AND ERECTION

Unless otherwise agreed in writing, assembly/erection shall be subject to the following provisions:

1. The Purchaser shall provide at its own expense and in good time:
 - a) all earth and construction work and other ancillary work outside the scope of the Supplier, including the necessary skilled and unskilled labour, construction materials and tools,
 - b) the equipment and materials necessary for assembly and commissioning such as scaffolds, lifting equipment and other devices as well as fuels and lubricants,
 - c) energy and water at the point of use including connections, heating and lighting,
 - d) suitable dry and lockable rooms of sufficient size adjacent to the site for the storage of machine parts, apparatus, materials, tools, etc. and adequate working and recreation rooms for the erection personnel, including sanitary facilities as are appropriate in the specific circumstances. Furthermore, the Purchaser shall take all measures it would take for the protection of its own possessions to protect the possessions of the Supplier and of the erection personnel at the site,
 - e) protective clothing and protective devices needed due to particular conditions prevailing on the specific site.
2. Before the erection work starts, the Purchaser shall make available of its own accord any information required concerning the location of concealed electric power, gas and water lines or of similar installations as well as the necessary structural data.
3. Prior to assembly or erection, the materials and equipment necessary for the work to start must be available on the site of assembly/erection and any preparatory work must have advanced to such a degree that assembly/erection can be started as agreed and carried out without interruption. Access roads and the assembly/erection site itself must be level and clear.
4. If assembly, erection or commissioning is delayed due to circumstances for which the Supplier is not responsible, the Purchaser shall bear the reason-

* Translation of the original German text

able costs incurred for idle times and any additional traveling of the Supplier or the erection personnel.

5. The Purchaser shall attest to the hours worked by the erection personnel towards the Supplier at weekly intervals and the Purchaser shall immediately confirm in writing if assembly, erection or commissioning has been completed.
6. If, after completion, the Supplier demands acceptance of the Supplies, the Purchaser shall comply therewith within a period of two weeks. In default thereof, acceptance is deemed to have taken place. Acceptance is also deemed to have been effected if the Supplies are put to use, after completion of an agreed test phase, if any.

VII. RECEIVING OF SUPPLIES

The Purchaser shall not refuse to receive Supplies due to minor defects.

VIII. DEFECTS AS TO QUALITY

The Supplier shall be liable for defects as to quality („Sachmängel“, hereinafter referred to as „Defects“) as follows:

1. All parts or services where a Defect becomes apparent within the limitation period shall, at the discretion of the Supplier, be repaired, replaced or provided again free of charge irrespective of the hours of operation elapsed, provided that the reason for the Defect had already existed at the time when the risk passed.
2. Claims based on Defects are subject to a limitation period of 12 months. This provision shall not apply where longer periods are prescribed by law according to Sec. 438 para. 1 No. 2 (buildings and things used for a building), Sec. 479 para. 1 (right of recourse), and Sec. 634a para. 1 No. 2 (defects of a building) German Civil Code („BGB“), as well as in cases of injury of life, body or health, or where the Supplier intentionally or grossly negligently fails to fulfill its obligation or fraudulently conceals a Defect. The legal provisions regarding suspension of expiration („Ablaufhemmung“), suspension („Hemmung“) and recommencement of limitation periods remain unaffected.
3. The Purchaser shall notify Defects to the Supplier in writing and without undue delay.
4. In the case of notification of a Defect, the Purchaser may withhold payments to a reasonable extent taking into account the Defect occurred. The Purchaser, however, may withhold payments only if the subject-matter of the notification of the Defect occurred is justified beyond doubt. Unjustified notifications of Defect shall entitle the Supplier to have its expenses reimbursed by the Purchaser.
5. The Supplier shall first be given the opportunity to supplement its performance („Nachherfüllung“) within a reasonable period of time.
6. If supplementary performance is unsuccessful, the Purchaser shall be entitled to cancel the contract or reduce the remuneration, irrespective of any claims for damages it may have according to Art. XI.
7. There shall be no claims based on Defect in cases of insignificant deviations from the agreed quality, of only minor impairment of usefulness, of natural wear and tear or damage arising after the transfer of risk from faulty or negligent handling, excessive strain, unsuitable equipment, defective workmanship, inappropriate foundation soil or from particular external influences not assumed under the contract, or from non-reproducible software errors. Claims based on defects attributable to improper modifications or repair work carried out by the Purchaser or third parties and the consequences thereof shall be likewise excluded.
8. The Purchaser shall have no claim with respect to expenses incurred in the course of supplementary performance, including costs of travel and transport, labour, and material, to the extent that expenses are increased because the subject-matter of the Supplies was subsequently brought to another location than the Purchaser's branch office, unless doing so complies with the intended use of the Supplies.
9. The Purchaser's right of recourse against the Supplier pursuant to Sec. 478 BGB is limited to cases where the Purchaser has not concluded an agreement with its customers exceeding the scope of the statutory provisions governing claims based on Defects. Moreover, No. 8 above shall apply mutatis mutandis to the scope of the right of recourse the Purchaser has against the Supplier pursuant to Sec. 478 para. 2 BGB.
10. Furthermore, the provisions of Art. XI (Other Claims for Damages) shall apply in respect of claims of damages. Any other claims of the Purchaser against the Supplier or its agents or any such claims exceeding the claims provided for in this Art. VIII, based on a Defect, shall be excluded.

IX. INDUSTRIAL PROPERTY RIGHTS AND COPYRIGHT; DEFECTS IN TITLE

1. Unless otherwise agreed, the Supplier shall provide the Supplies free from third parties' industrial property rights and copyrights (hereinafter referred to as „IPR“) with respect to the country of the place of destination. If a third party asserts a justified claim against the Purchaser based on an infringement of an IPR with respect to the Supplies made by the Supplier and then used in conformity with the contract, the Supplier shall be liable to the Purchaser within the time period stipulated in Art. VIII No. 2 as follows:
 - a) The Supplier shall choose whether to acquire, at its own expense, the right to use the IPR with respect to the Supplies concerned or whether to

modify the Supplies such that they no longer infringe the IPR or replace them. If this would be unreasonable to demand from the Supplier, the Purchaser may cancel the contract or reduce the remuneration pursuant to the applicable statutory provisions.

- b) The Supplier's liability to pay damages shall be governed by Art. XI.
 - c) The above obligations of the Supplier shall only apply if the Purchaser (i) immediately notifies the Supplier of any such claim asserted by the third party in writing, (ii) does not concede the existence of an infringement and (iii) leaves any protective measures and settlement negotiations to the discretion of the Supplier. If the Purchaser stops using the Supplies in order to reduce the damage or for other good reason, it shall be obliged to point out to the third party that no acknowledgement of the alleged infringement may be inferred from the fact that the use has been discontinued.
2. Claims of the Purchaser shall be excluded if it is itself responsible for the infringement of an IPR.
 3. Claims of the Purchaser shall also be excluded if the infringement of the IPR is caused by specifications made by the Purchaser, to a type of use not foreseeable by the Supplier or to the Supplies being modified by the Purchaser or being used together with products not provided by the Supplier.
 4. In addition, with respect to claims by the Purchaser pursuant to No. 1 a) above, Art. VIII Nos. 4, 5, and 9 shall apply mutatis mutandis in the event of an infringement of an IPR.
 5. Where other defects in title occur, Art. VIII shall apply mutatis mutandis.
 6. Any other claims of the Purchaser against the Supplier or its agents or any such claims exceeding the claims provided for in this Art. IX, based on a defect in title, shall be excluded.

X. IMPOSSIBILITY OF PERFORMANCE; ADAPTATION OF CONTRACT

1. To the extent that Supplies are impossible to be carried out, the Purchaser shall be entitled to claim damages, unless the Supplier is not responsible for the impossibility. The Purchaser's claim for damages shall, however, be limited to an amount of 10 % of the value of the part of the Supplies which, owing to the impossibility, cannot be put to the intended use. This limitation shall not apply in the case of mandatory liability based on intent, gross negligence or injury of life, body or health; this does not imply a change in the burden of proof to the detriment of the Purchaser. The right of the Purchaser to cancel the contract shall remain unaffected.
2. Where unforeseeable events within the meaning of Art. IV No. 2 substantially change the economic importance or the contents of the Supplies or considerably affect the Supplier's business, the contract shall be adapted taking into account the principles of reasonableness and good faith. Where doing so is economically unreasonable, the Supplier shall have the right to cancel the contract. If the Supplier intends to exercise its right to cancel the contract, it shall notify the Purchaser thereof without undue delay after having realised the repercussions of the event; this shall also apply even where an extension of the delivery period had previously been agreed with the Purchaser.

XI. OTHER CLAIMS FOR DAMAGES

1. Any claims for damages and reimbursement of expenses the Purchaser may have (hereinafter referred to as „Claims for Damages“), based on whatever legal reason, including infringement of duties arising in connection with the contract or tort, shall be excluded.
2. The above shall not apply in the case of mandatory liability, e. g. under the German Product Liability Act („Produkthaftungsgesetz“), in the case of intent, gross negligence, injury of life, body or health, or breach of a condition which goes to the root of the contract („wesentliche Vertragspflichten“). However, Claims for Damages arising from a breach of a condition which goes to the root of the contract shall be limited to the foreseeable damage which is intrinsic to the contract, unless caused by intent or gross negligence or based on liability for injury of life, body or health. The above provision does not imply a change in the burden of proof to the detriment of the Purchaser.
3. To the extent that the Purchaser has a valid Claim for Damages according to this Art. XI, it shall be time-barred upon expiration of the limitation period applicable to Defects pursuant to Art. VIII No. 2. In the case of claims for damages under the German Product Liability Act, the statutory provisions governing limitation periods shall apply.

XII. VENUE AND APPLICABLE LAW

1. If the Purchaser is a businessperson, sole venue for all disputes arising directly or indirectly out of the contract shall be the Supplier's place of business. However, the Supplier may also bring an action at the Purchaser's place of business.
2. Legal relations existing in connection with this contract shall be governed by German substantive law, to the exclusion of the United Nations Convention on Contracts for the International Sale of Goods (CISG).

XIII. SEVERABILITY CLAUSE

The legal invalidity of one or more provisions of this contract shall in no way affect the validity of the remaining provisions. This shall not apply if it would be unreasonable for one of the parties to continue the contract.
